

We support Dr. Segalman's written comments to the FCC of 7/19/98. Such as service is necessary & even vital for some people (e.g. stroke or CVA survivors) who may need to adapt to communicating with speech impairments they never had before. We especially support his comments on outreach and the use of MSWs FOR OUTREACH AS STS GETS UNDERWAY. We agree that the nature of this population dictates that someone with an MSW or similar credential conduct the outreach and service monitoring in each state.

Sincerely,

David W. Klibanow M.S.W., C.C.S.W.
