Released: June 28, 1995

On June 23, 1995, Bell Atlantic, GTE, Pacific Bell, Southwestern Bell, and five other local exchange carriers (LECs) presented an industry-wide collaborative proposal for an intelligent network (IN) project (IN project). In the IN project, the LECs propose to explore the service creation capabilities of IN platforms owned by LECs and third parties in connection with exchange and exchange access services. The LECs propose laboratory tests and field trials to obtain data regarding the requirements and issues concerning mediated access to the IN. The proposed IN project would be voluntary and may include LECs, interexchange carriers, enhanced service providers, and other telecommunications providers. At the completion of the 24 month IN project, the LECs propose to deliver a final report to the industry and the Commission. The LECs recommend that the Commission recognize the IN Project as the appropriate way to proceed in the IN proceeding.

On June 26, 1995, Ameritech provided an IN competitive network report to the Common Carrier Bureau in which it states that there has been increased competition and consumer choice in access to and use of intelligent network capabilities. Thus, Ameritech contends, there is no longer a need for the Commission to mandate IN access as proposed in the Notice of Proposed Rulemaking (8 FCC Rcd 6813 (1993)).
