For Immediate Release

FCC ACTS TO PROMOTE PUBLIC SAFETY BY CURBING PRISON INMATES’ USE OF CONTRABAND WIRELESS DEVICES

WASHINGTON, March 23, 2017 – Today, the FCC took important steps to help law enforcement combat the serious threats posed by the use of contraband wireless devices by inmates in prisons and jails nationwide.

In recent years, the use of contraband wireless devices by inmates across the country has grown rapidly. Inmates use these devices to commit criminal acts while inside correctional facilities, such as ordering hits, running drug operations, and operating phone scams. Some correctional facilities have implemented radio-based technologies to detect and block the use of contraband wireless devices that make and receive phone calls and send and receive text messages, as well as block access to the Internet (including use of apps). These technologies, called Contraband Interdiction Systems (CISs), use commercial spectrum and therefore require FCC authorization to operate.

The rules adopted today will simplify the process for CIS operators to obtain this FCC authorization, allowing for quicker and easier deployment of these systems in correctional facilities. Specifically, today’s Order introduces a range of solutions including:

- FCC Authorization Process: The rules adopted today will streamline the process so CIS operators can obtain authorizations faster and with fewer filings.
- Carrier Cooperation: A CIS operator must have arrangements with every carrier providing service in its area in order for the system to be effective. The rules will require wireless carriers to cooperate with CIS operators and correctional facilities in a timely manner.
- FCC Ombudsperson: The Commission will designate an Ombudsperson to serve as the single point of contact for CIS operators and wireless carriers.

In the Further Notice of Proposed Rulemaking, the Commission also seeks comment on additional tools for combating contraband wireless devices.

Inmates’ use of contraband wireless devices is a serious threat to the safety and welfare of correctional facility employees, other inmates, and innocent members of the public. The actions taken today continue the Commission’s efforts to spur the development of technological solutions to fight this problem.

Action by the Commission March 23, 2017 by Report and Order and Further Notice of Proposed
