In the Matter of

AMERICAN RADIO RELAY LEAGUE

Emergency Request for a Temporary Waiver of
Section 97.307(f) of the Commission’s Rules

ORDER

Adopted: October 5, 2017 Released: October 5, 2017

By the Deputy Chief, Mobility Division, Wireless Telecommunications Bureau:

1. **Introduction.** We have before us a request filed by the American Radio Relay League (ARRL) for a temporary waiver to permit amateur data transmissions at a higher symbol rate than currently is permitted by section 97.307(f) of the Commission’s rules, in order to facilitate hurricane relief communications between the continental United States and Puerto Rico.\(^1\) For the reasons set forth below, we grant the waiver request.

2. **Background.** Section 97.307(f) limits the symbol rate (also known as the baud rate) – the rate at which the carrier waveform amplitude, frequency, and/or phase is varied to transmit information\(^2\) – for high frequency (HF) amateur radioteletype (RTTY)/data transmissions as follows to 300 bauds for frequencies below 28 MHz (except the 60 meter band), and 1200 bauds in the 10 meter (28-29.7 MHz) band.\(^3\) The digital code used to encode the signal being transmitted must be one of the codes specified in section 97.309(a) of the Commission’s rules, but an amateur station transmitting a RTTY or data emission using one of the specified digital codes may use any technique whose technical characteristics have been publicly documented, such as CLOVER, G-TOR, or PACTOR.\(^4\)

3. In 2016, in response to an ARRL petition for rulemaking, the Commission proposed to remove the symbol rate limitations, which it tentatively concluded had become unnecessary due to advances in modulation techniques and no longer served a useful purpose.\(^5\) That proceeding is currently pending, but there is consensus among submitted comments for eliminating the symbol rate limits.

---

\(^1\) E-mail from Christopher D. Imlay, General Counsel, ARRL to Donald K. Stockdale, Jr., Roger Noel, and Scot Stone, FCC (Sept. 29, 2017 16:06 EDT) (Waiver Request); see 47 CFR § 97.307(f).

\(^2\) *Amendment of Part 97 of the Commission’s Amateur Radio Service Rules to Permit Greater Flexibility in Data Communications*, Notice of Proposed Rulemaking, 31 FCC Rcd 8485, 8485, para. 1 (2016) (*Baud Rate NPRM*).

\(^3\) 47 C.F.R. § 97.307(f)(3), (4). In the 60 meter (5.3305-5.4064 MHz) band, there is no maximum symbol rate, but bandwidth is limited to 2.8 kilohertz for data and 60 hertz for RTTY. See 47 CFR § 97.307(f)(14).

\(^5\) See *Baud Rate NPRM*, 31 FCC Rcd at 8458, para. 8.
4. ARRL states that it is shipping to Puerto Rico five PACTOR radio modems for use in connection with Hurricane Maria disaster relief communications. It requests a waiver of section 97.307(f) in order to permit higher speed data transmissions in order to facilitate more effective communications. In particular, it seeks a waiver to permit transmissions using PACTOR 3 and PACTOR 4 that exceed the current symbol rate limitations. The request is made on behalf of ARRL and licensed radio amateurs who are directly involved with HF hurricane relief communications between the United States mainland and Puerto Rico, involving Puerto Rico or the U.S. Virgin Islands.

5. Discussion. To obtain a waiver of the Commission’s rules, a petitioner must demonstrate either that (i) the underlying purpose of the rule(s) would not be served or would be frustrated by application to the present case, and that a grant of the waiver would be in the public interest; or (ii) in view of unique or unusual factual circumstances of the instant case, application of the rule(s) would be inequitable, unduly burdensome, or contrary to the public interest, or the applicant has no reasonable alternative. We conclude that ARRL’s request should be granted.

6. ARRL has already dispatched large amounts of communications equipment and fifty trained amateur radio operators to Puerto Rico to conduct disaster relief communications. While PACTOR 3 and PACTOR 4 modems are downward-compatible with slower speed versions of PACTOR, ARRL asserts that the higher data rates offered by PACTOR 3 and PACTOR 4 emissions are critical to sending hurricane relief communications.

7. We conclude that granting the requested waiver is in the public interest. Hurricane Maria caused massive destruction in Puerto Rico, and communications services continue to be disrupted. Thus, to accommodate amateur radio operators assisting in the recovery efforts, we grant the ARRL’s waiver request for the period of 60 days from the date of this Order. The waiver is limited to amateur radio operators in Puerto Rico using PACTOR 3 and PACTOR 4 emissions, and to those licensed amateur radio operators in the continental United States who are directly involved with HF hurricane relief communications involving Puerto Rico or the U.S. Virgin Islands.

8. Accordingly, IT IS ORDERED that pursuant to section 4(i) of the Communications Act of 1934, as amended, 47 U.S.C. § 154(i), and section 1.925 of the Commission’s rules, 47 CFR § 1.925, the Emergency Request for a Temporary Waiver of Section 97.307(f) of the Commission’s Rules filed by the American Radio Relay League on September 29, 2017, IS GRANTED as set forth above.

6 See Waiver Request.
7 See id. ARRL notes that PACTOR 4 has a symbol rate of 1800 bauds, and PACTOR 3 has an initial symbol rate of 100 bauds (which is within the current limit) but operates at higher speed when communicating with a faster PACTOR modem. E-mail from Christopher D. Imlay, General Counsel, ARRL to Scot Stone, FCC (Oct. 2, 2017 12:45 EDT).
8 See Waiver Request.
9 47 CFR §§ 1.925(b)(3).
10 See Waiver Request.
11 See id.
9. This action is taken under delegated authority pursuant to sections 0.131 and 0.331 of the Commission’s rules, 47 CFR §§ 0.131, 0.331.
