

Economic Area (EA)-based 800 MHz Specialized Mobile Radio (SMR) licensees in the 813.5-824/858.5-869 MHz¹ portion of the 800 MHz band to more efficiently utilize their spectrum resources to deploy competitive wireless services. Consumers will benefit from this flexibility through improved access to advanced wireless services, including in rural, unserved, and underserved areas.² We are also mindful of the need to protect 800 MHz public safety licensees from harmful interference, and take action in this *Report and Order* to help ensure that the flexibility provided to EA-based 800 MHz SMR licensees does not cause harmful interference to 800 MHz public safety licensees.

II. BACKGROUND

2. The Commission revised its Part 90 rules to create a new geographic-licensing framework for 800 MHz SMR in 1995.³ In doing so, the Commission transitioned the 800 MHz SMR service from a site-by-site licensing process that required licensees to seek prior authorization to add or modify individual frequency channels and transmitter sites to a geographic-based licensing mechanism that provides licensees with the flexibility to add transmitters or modify operations within their licensed market and licensed spectrum as market conditions dictate.⁴

3. The Commission determined that wide-area licensing would “give licensees the flexibility to use technologies that can operate on either contiguous or non-contiguous spectrum”⁵ and that large spectrum blocks were necessary for “broadband technologies such as CDMA and GSM.”⁶ With wide-area licenses, the Commission indicated licensees would be able to “compete effectively with other CMRS providers, such as cellular and broadband PCS systems.”⁷ Further, the Commission stated its intent in the Executive Summary of the *800 MHz SMR First Report and Order* that EA-based licensees would have “full discretion over channelization of available spectrum within the block.”⁸ The Commission also adopted an out-of-band emission (OOBE) requirement that applies to the outer channels of the spectrum block and to spectrum adjacent to interior channels used by incumbents.⁹

¹ Licensees may operate 800 MHz high density cellular systems in the band segment 813.5-824/858.5-869 MHz only in the counties listed in Section 90.614(c) of the Commission’s rules. *See* 47 C.F.R. §§ 90.7, 90.614(c). In the rest of the United States and its territories, except the Canada and Mexico border areas, licensees may operate 800 MHz high density cellular systems in the 817-824/862-869 MHz band segment. *See id.* §§ 90.7, 90.614(a)-(b), 90.619. Accordingly, the discussion and rule adopted herein apply to the 813.5-824/858.5-869 MHz band segment in the Southeastern United States as specified in Section 90.614(c), and to the 817-824/862-869 MHz band segment in other areas of the United States. *See id.* § 90.614(a)-(c).

² *See* SouthernLINC Wireless (SouthernLINC) Comments at 8.

³ Amendment of Part 90 of the Commission’s Rules to Facilitate Future Development of SMR Systems in the 800 MHz Frequency Band; Implementation of Sections 3(n) and 322 of the Communications Act; Regulatory Treatment of Mobile Services; Implementation of Section 309(j) of the Communications Act – Competitive Bidding, PR Docket No. 93-144, RM-8117, RM-8030, RM-8029, GN Docket No. 93-252, PP Docket No. 93-253, *First Report and Order*, *Eighth Report and Order*, and *Second Further Notice of Proposed Rulemaking*, 11 FCC Rcd 1463, 1479, 1483, ¶¶ 1, 13, 23 (1995) (*800 MHz SMR First Report and Order*). The Commission designated 10 megahertz of contiguous spectrum in the 800 MHz band for EA-based licensing. *Id.* at 1479-80, ¶ 14.

⁴ *Id.* at 1474-76, 1479-80, ¶¶ 4-7, 13-14.

⁵ *Id.* at 1479-80, ¶ 14.

⁶ *Id.* at 1489, ¶ 37.

⁷ *Id.* at 1479, ¶ 13.

⁸ *Id.* at 1469, ¶ 3.

⁹ *Id.* at 1519, ¶ 101; 47 C.F.R. § 90.691.

4. In 2004, the Commission initiated a process to reconfigure the 800 MHz band to “address the [then] ongoing and growing problem of interference to public safety communications in the 800 MHz band.”¹⁰ The interference problem was caused “by a fundamentally incompatible mix of two types of communications systems: cellular-architecture multi-cell systems . . . and high-site non-cellular systems.”¹¹ To provide immediate relief, the Commission implemented technical standards that defined unacceptable interference in the 800 MHz band, while also reconfiguring the band to separate commercial wireless systems from public safety and other high site systems.¹² Under the reconfiguration plan, SMR and other cellular-system operators including Sprint Nextel were required to vacate the 806-817/851-862 MHz band segment and relocate to the 817-824/862-869 MHz band segment.¹³

5. In part due to the reconfiguration of the 800 MHz band, Sprint Nextel holds the majority of EA-based 800 MHz SMR licenses, and reports that it “has or will soon have access to 14 MHz of spectrum in the ESMR band . . . across much of the nation.”¹⁴ In June 2010, Sprint Nextel announced its Network Vision initiative, under which it will “deploy next-generation base station technology that will operate across all of Sprint’s licensed spectrum.”¹⁵ As part of its Network Vision initiative, Sprint Nextel reports it will incorporate its 800 MHz SMR spectrum into its CDMA network and forthcoming LTE deployment.¹⁶ However, Sprint Nextel is unable to aggregate its EA-based 800 MHz SMR channels to deploy CDMA or LTE because of the channel spacing and bandwidth limitation in Section 90.209 of the Commission’s rules.¹⁷ Specifically, Section 90.209 limits EA-based 800 MHz SMR licensees to 25 kHz channels with a bandwidth of 20 kHz.¹⁸ Therefore, in June 2011, Sprint Nextel filed a petition for declaratory ruling, or rulemaking in the alternative, that would allow EA-based 800 MHz SMR licensees (commonly referred to as Enhanced SMR or ESMR)¹⁹ to exceed the channel spacing and bandwidth

¹⁵ *Id.* at 3.

¹⁶ *Id.* at 3-4.

¹⁷ Sprint Nextel reports that CDMA requires contiguous spectrum and occupies a 1.25 MHz bandwidth, and that other wireless carriers are deploying LTE using 10 megahertz or 20 megahertz channel pairs. *Id.* at 2.

¹⁸ 47 C.F.R. § 90.209(b)(5). The channelization scheme and bandwidth authorization originated from a 1978 decision in which the Commission deemed that analog frequency modulated emissions below 947 MHz had an authorized bandwidth of 20 kHz with frequency deviation of 5 kHz. Private Land Mobile Radio Services, *Report and Order*, 69 FCC 2d 1612 (1978); 43 Fed. Reg. 54788, 54838-39 (Nov. 22, 1978).

¹⁹ Enhanced SMR and ESMR are terms coined by Sprint Nextel to describe SMR systems that use cellular architecture, *i.e.*, systems that use multiple, interconnected, multi-channel transmit/receive cells and employ

(continued....)

limitation under Section 90.209.²⁰ The Wireless Telecommunications Bureau released a *Public Notice* seeking comment on Sprint Nextel's petition.²¹

6. Based on the record developed in response to the *Public Notice* and our analysis of the relevant Part 90 rules and the underlying 800 MHz proceeding, we concluded that while the Commission may have intended to provide EA-based 800 MHz SMR licensees with discretion over channelization within their channel blocks, the Commission did not amend the applicable channel spacing and bandwidth limitation in Section 90.209 to allow licensees to exercise such discretion.²² We therefore denied Sprint Nextel's request for a declaratory ruling and issued a *Notice of Proposed Rulemaking (Notice)* proposing to allow EA-based 800 MHz SMR licensees to exceed the channel spacing and bandwidth limitation in Section 90.209,²³ subject to proposed conditions to protect against potential harmful interference with 800 MHz public safety licensees.²⁴

7. Commenters generally support our proposal to provide flexibility to EA-based 800 MHz SMR licensees to exceed the channel spacing and bandwidth limitation in Section 90.209.²⁵ Similarly,

(...continued from previous page)

frequency reuse to serve a larger number of subscribers than is possible using non-cellular technology. *See 800 MHz Reconfiguration Report and Order*, 19 FCC Rcd at 14972 n.6.

²⁰ Request for Declaratory Ruling That The Commission's Rules Authorize Greater Than 25 kHz Bandwidth Operations In The 817-824/862-869 MHz Band, *Petition for Declaratory Ruling*, WT Docket No. 11-110, at 1 (filed June 3, 2011) (Sprint Nextel Petition); 47 C.F.R. § 90.209(b)(5).

²¹ Wireless Telecommunications Bureau Seeks Comment on Petition From Sprint Nextel to Allow Wideband Operations in 800 MHz Enhanced Specialized Mobile Radio Service Bands, WT Docket No. 11-110, *Public Notice*, 26 FCC Rcd 9428 (2011). Prior to Sprint Nextel filing the petition, and subsequently while the petition has been pending, the Commission has granted waivers and special temporary authorizations to allow Sprint Nextel to deploy and test CDMA in several markets on its EA-based 800 MHz SMR licenses. *See* Sprint Nextel Call Signs WPLM660, WPLM661, WQNX442, WQNX443, WQNX444, WQOQ770, WQOQ771, WQOQ772, and WQOU823. The Commission imposed several conditions on all of these waivers and special temporary authorizations to ensure that the wideband operations do not increase the interference potential to 800 MHz public safety licensees. For example, the waivers and authorizations are conditioned on Sprint Nextel providing notice to certain 800 MHz public safety licensees prior to activating CDMA sites pursuant to the waiver or STA, and reaffirm that Sprint Nextel must comply with the Commission's rules prohibiting unacceptable interference to non-cellular 800 MHz licensees. *See* Sprint Nextel Call Signs WPLM660, WPLM661, WQNX442, WQNX443, WQNX444, WQOQ770, WQOQ771, WQOQ772, and WQOU823. Sprint Nextel filed for additional waivers in March 2012, and the Wireless Telecommunications Bureau issued a *Public Notice* seeking comment on the request. *See* Requests for Waiver of Section 90.209 of the Commission's Rules to Permit the Operation of Broadband CDMA Technology in the 817-824/862-869 MHz Band, *Request for Rule Waiver*, WT Docket No. 12-82 (filed Mar. 27, 2012); Wireless Telecommunications Bureau Seeks Comment on Request by Sprint Nextel Corporation for Waiver of Section 90.209 of the Commission's Rules, WT Docket No. 12-82; DA 12-506, *Public Notice* (rel. Mar. 30, 2012).

²² Improving Spectrum Efficiency Through Flexible Channel Spacing and Bandwidth Utilization for Economic Area-based 800 MHz Specialized Mobile Radio Licensees; Request for Declaratory Ruling that the Commission's Rules Authorize Greater than 25 kHz Bandwidth Operations in the 817-824/862-869 MHz Band, WT Docket No. 12-64, WT Docket No. 11-110, *Notice of Proposed Rulemaking*, 27 FCC Rcd 2742, 2743, ¶ 4 (2012) (*Notice*).

²³ *See id.* at 2746-47, ¶¶ 10-12.

²⁴ *Id.* ¶¶ 12-14.

Several commenters conditionally support the proposals in the *Notice* or the general principle of providing licensees with flexibility over channel spacing. *See* Association of Public-Safety

(continued....)

many commenters support or do not oppose the proposed conditions to protect 800 MHz public safety licensees from harmful interference.²⁶ As discussed below, we adopt the proposals from the *Notice* with a minor modification.

III. DISCUSSION

8. We amend Section 90.209 of the Commission's rules to allow EA-based 800 MHz SMR licensees operating in the 813.5-824/858.5-869 MHz portion of the 800 MHz band to provide wireless services across aggregated channels, without unnecessary bandwidth or channelization limitations.²⁷ We conclude that the public interest will be served by allowing EA-based 800 MHz SMR licensees to exceed the existing channel spacing and bandwidth limitation in Section 90.209, subject to conditions designed to protect neighboring public safety operations. We find strong support in the record for this conclusion.²⁸ As MSI asserts, the proposals in the *Notice* "strike the right balance . . . by allowing EA-based 800 MHz SMR licensees to introduce more advanced wideband technologies on their licensed spectrum in situations where there is little risk to public [safety] operations."²⁹

9. We also find that the proposals from the *Notice* will balance the benefits of providing channel spacing and bandwidth flexibility to EA-based 800 MHz SMR licensees with the need to continue to prevent harmful interference to 800 MHz public safety licensees.³⁰ As described below, the record shows that with the flexibility we adopt today, EA-based 800 MHz SMR licensees will be able to invest in the deployment of new wireless technologies, such as CDMA and LTE, while incurring little additional compliance costs.³¹ The record also shows that consumers will benefit from access to these advanced technologies.³² Further, the record demonstrates little additional costs to 800 MHz public safety licensees from such operation relative to the status quo, which may be incurred through increased monitoring for harmful interference for a time following an EA-based 800 MHz SMR licensee's

²⁷ APCO urges the Commission to clarify that the flexibility we provide in this *Report and Order* only applies to SMR licensees in 813.5-817/858.5-862 MHz in the Southeastern United States. APCO Comments at 2. We note that the band segment 813.5-817/858.5-862 MHz is available for SMR operations only in the Southeastern United States. 47 C.F.R. § 90.614(c); see also *supra* note 1.

²⁸ See *supra* notes 25-26.

²⁹ MSI Comments at 3. SouthernLINC further argues that the proposals will open additional spectrum for mobile broadband services, "while continuing to protect against interference to public safety licensees in the 800 MHz band." SouthernLINC Comments at 8. Sprint Nextel concludes that the flexibility provided "will greatly benefit consumers without increasing the risk of harmful interference to public safety licensees." Sprint Nextel Reply Comments at 1.

³⁰ See, e.g., SouthernLINC Comments 10-12 (describing the benefits of channel spacing and bandwidth flexibility for EA-based 800 MHz SMR licensees, the protections provided by the proposals in the *Notice*, and the "modest" burden imposed by the notice requirement proposed in the *Notice*).

³¹ See SouthernLINC Comments at 7, 10-12; Sprint Nextel Comments at 3-8.

³² See RCA Comments at 2-3; Sprint Nextel Comments at 7-8; SouthernLINC Comments at 8; Sprint Nextel Comments at 7-8; Sprint Nextel Reply Comments at 1-3.

transition to a wideband technology.³³ We find that, based on the record, the minimal costs incurred by EA-based 800 MHz SMR licensees or 800 MHz public safety licensees are far outweighed by the benefits gained through the efficient utilization of spectrum resources and the deployment and availability of advanced wireless services.

10. Below we explain the conditions under which EA-based 800 MHz SMR licensees may exceed the channel spacing and bandwidth limitation in Section 90.209, take steps to protect 800 MHz public safety licensees from harmful interference, and discuss the continued applicability and sufficiency of other Part 90 rules. We also discuss and decline to adopt additional protections proposed by commenters and decline to take other actions that we find are outside of the scope of this proceeding.

A. Channel Spacing and Bandwidth Flexibility for EA-based 800 MHz SMR Licensees

11. We find that there are substantial benefits to revising our Part 90 rule regarding channel spacing and bandwidth limits. The record demonstrates that providing EA-based 800 MHz SMR licensees the flexibility to exceed the channel spacing and bandwidth limitation in Section 90.209 effectively eliminates a barrier to the deployment of advanced wireless technologies, promotes spectrum efficiency, and improves regulatory parity between commercial wireless licensees, to consumers' benefit.³⁴ Under this rule change, EA-based 800 MHz SMR licensees will no longer be forced to comply with an inefficient channelization scheme that prevents licensees from utilizing multiple contiguous channels to provide service.³⁵ With flexibility regarding channelization and bandwidth utilization, as Sprint Nextel and SouthernLINC assert, EA-based 800 MHz SMR licensees will be able to deploy CDMA, LTE, and other advanced wireless technologies.³⁶ Licensees will therefore be able to transition networks deployed using EA-based 800 MHz SMR licenses from legacy narrowband technologies to 3G as well as other advanced technologies including LTE, in order to better compete in the commercial wireless marketplace.³⁷ We agree with Sprint Nextel that this will allow EA-based 800 MHz SMR licensees to "respond to consumer demand for innovative wireless services"³⁸ including, as SouthernLINC argues, through the deployment of advanced wireless services to "rural, unserved, and underserved areas."³⁹

12. Based on the record, we therefore find that it is in the public interest to amend Section 90.209 to allow EA-based 800 MHz SMR licensees to exceed the channel spacing and bandwidth

³⁶ Sprint Nextel Comments at 3-7; SouthernLINC Comments at 7. SouthernLINC points out that the 3rd Generation Partnership Project (3GPP), the wireless standards organization, recently approved a standard for LTE in Band 26, "which includes the 800 MHz ESMR band in the United States." SouthernLINC Comments at 7. SouthernLINC also points out that 3GPP has developed UMTS and HSPA specifications for Band 26, which "are currently awaiting finalization by 3GPP." *Id.*

³⁷ See RCA Comments at 3; SouthernLINC Reply Comments at 4; Sprint Nextel Comments at 8-9.

³⁸ Sprint Nextel Comments at 4.

³⁹ SouthernLINC Comments at 8. Southern also argues that when SouthernLINC transitions its network to more advanced wireless technologies, SouthernLINC will be able to provide innovative services to Southern's electric company affiliates. Southern Comments at 3.

limitation in Section 90.209 in the 813.5-824/858.5-869 MHz band segment⁴⁰ in National Public Safety Planning Advisory Committee (NPSPAC) regions where all 800 MHz public safety licensees in the region have completed band reconfiguration. In NPSPAC regions where reconfiguration is incomplete, we amend Section 90.209 to allow EA-based 800 MHz SMR licensees to exceed the channel spacing and bandwidth limitation only in the 813.5-821/858.5-866 MHz band segment.⁴¹

B. Protection of 800 MHz Public Safety Licensees

13. We recognize that the affected portion of the 800 MHz band is currently subject to an ongoing reconfiguration process to protect 800 MHz public safety users from interference from incompatible commercial networks. We seek to ensure that the progress made to protect public safety licensees from interference is not affected by the flexibility we provide today, and adopt additional protections for 800 MHz public safety licensees.

14. We find based on the record that the 30-day notification condition we proposed in the *Notice*, with a minor modification, will help protect 800 MHz public safety licensees from the risk of harmful interference.⁴² We require all EA-based 800 MHz SMR licensees that seek to exceed the channel spacing and bandwidth limitation in Section 90.209 to provide at least 30 days written notice to public safety licensees with base stations in a NPSPAC region where the EA-based 800 MHz SMR licensee intends to exceed the channel spacing and bandwidth limitation, and to public safety licensees with base stations within 113 kilometers (70 miles) of an affected NPSPAC region border.⁴³ Further, pursuant to a request by CTO, we modify our original proposal to require that the notice include the estimated date on which the EA-based 800 MHz SMR licensee will begin operations that exceed the channel spacing and bandwidth limitation.⁴⁴ We find that by requiring EA-based 800 MHz SMR licensees to include the estimated date of operation in the notice, 800 MHz public safety licensees will be better able to monitor their networks for harmful interference on and around the date of a SMR licensee's expected transition from operations within the channel spacing and bandwidth limitation of Section 90.209 to operations that exceed the channel spacing and bandwidth limitation.

15. We agree with commenters that the 30-day notice requirement will allow EA-based 800 MHz SMR licensees to use their spectrum more efficiently, while continuing to protect 800 MHz public

⁴⁰ Licensees are authorized to operate in the 813.5-824/858.5-869 MHz portion of the 800 MHz band only in the counties listed in Section 90.614(c). *See supra* note 1.

⁴¹ Consistent with this *Report and Order*, EA-based 800 MHz SMR licensees will only be able to exceed the channel spacing and bandwidth limitation utilizing frequencies in 821-824/866-869 MHz once 800 MHz public safety licensees have vacated this portion of the 800 MHz band in a given NPSPAC region. Upon all 800 MHz public safety licensees in a region completing band reconfiguration, EA-based 800 MHz SMR licensees in the 821-824/866-869 MHz band would then be allowed to exceed the channel spacing and bandwidth limitation.

⁴² *See* MSI Comments at 3-4; TIA Comments at 3-4; SouthernLINC Comments at 10-12; Sprint Nextel Reply Comments at 3.

⁴³ Under conditions imposed on some of its 800 MHz licenses, Sprint Nextel must provide 60 days notice to every NPSPAC licensee in the affected NPSPAC Region prior to initiating operations in the 821-824/866-869 MHz band. *See* Letter from David L. Furth, Associate Bureau Chief, Public Safety and Homeland Security Bureau, FCC, and Joel D. Taubenblatt, Acting Deputy Chief, Wireless Telecommunications Bureau, FCC, to Lawrence R. Krevor, Vice President – Spectrum, Sprint Nextel Corp., and James B. Goldstein, Director, Spectrum Reconfiguration, Sprint Nextel Corp., WT Docket No. 02-55, 23 FCC Rcd 7416, 7419-7421 (PSHSB May 6, 2008).

⁴⁴ CTO recommends an additional notice requirement, which we decline to adopt, as discussed below. *See* CTO Reply Comments at 2. However, we do find that part of CTO's additional notice requirement – that the notice include the specific date on which operations will begin – would improve the notice requirement proposed in the *Notice*. *Id.*

safety licensees.⁴⁵ Pursuant to this notice requirement, in the event that an 800 MHz public safety licensee experiences harmful interference subsequent to receiving the required notice from an EA-based 800 MHz SMR licensee, the public safety licensee can more quickly identify or eliminate EA-based 800 MHz SMR operations as the source of interference.⁴⁶ While this requirement will result in certain costs to EA-based licensees who must identify and timely notify affected public safety entities, we find that the resulting benefits – efficient resolution of interference to a public safety entity – offsets such costs. As SouthernLINC states, this condition “will impose only a modest burden on ESMR licensees and will ensure that 800 MHz public safety licensees are fully informed, thus making it easier to swiftly resolve any issues or concerns that may arise.”⁴⁷

16. APCO and CTO suggest additional conditions that they argue will help protect 800 MHz public safety licensees from harmful interference caused by EA-based 800 MHz SMR licensees that exceed the channel spacing and bandwidth limitation.⁴⁸ APCO urges us to require EA-based 800 MHz SMR licensees that seek to exceed the channel spacing and bandwidth limitation in NPSPAC regions bordering Mexico to provide 30 days prior written notification to all public safety licensees in the border area, and that such notice should include a 24-hour contact number in case interference occurs.⁴⁹

17. We decline to modify the notice requirement as requested by APCO. APCO describes a scenario in which an EA-based 800 MHz SMR licensee exceeds the channel spacing and bandwidth limitation in a NPSPAC region that includes the Mexico border area, and is operating co-channel with an 800 MHz public safety licensee with a base station in the Mexico border area within the same NPSPAC region.⁵⁰ In this scenario, the EA-based 800 MHz SMR licensee would be required under this *Report and Order* to transmit the 30-day notification to the public safety licensee in the Mexico border area because the licensees would be in the same NPSPAC region. We also note that, as described below, EA-based 800 MHz SMR licensees will still be obligated to meet all other technical requirements under Part 90, including co-channel separation distances, further protecting 800 MHz public safety licensees operating in the Mexico border area.⁵¹ We find that the notice requirement adopted herein is sufficient to provide additional protection to all 800 MHz public safety licensees from any harmful interference caused by wideband EA-based 800 MHz SMR operations, and find no reason to modify the notice requirement for 800 MHz public safety operations in the Mexico border area.

18. Further, with respect to APCO’s request that the notice be accompanied by a 24-hour contact number, Sprint Nextel notes that the 24-hour reporting capability is currently available on the CMRS/public safety interference reporting website,⁵² required by the *800 MHz Reconfiguration Report and Order*,⁵³ in order to implement the interference resolution procedures set forth in Section 90.674 of

⁴⁵ See MSI Comments at 4; SouthernLINC Comments at 12; SouthernLINC Reply Comments at 2-6; Sprint Nextel Reply Comments at 3; TIA Comments at 4; see also APCO Comments at 2.

⁴⁷ SouthernLINC Comments at 12.

⁴⁸ See APCO Comments at 2-3; CTO Reply Comments at 2.

⁴⁹ APCO Comments at 2-3.

⁵⁰ APCO Comments at 2. See Letter from James B. Goldstein, Sprint Nextel Corp., to Marlene H. Dortch, Secretary, FCC, at 2 (filed May 1, 2012) (Sprint Nextel May 1, 2012 *Ex Parte*) (stating that the Commission’s proposed notice requirement includes the scope of notice recommended by APCO).

⁵¹ See *infra* Part III.C; 47 U.S.C. § 90.621(b).

⁵² See Sprint Nextel Reply Comments at 4; 800 MHz Interference Notification Site, <http://www.publicsafety800mhzinterference.com/CTIAWeb/>.

⁵³ *800 MHz Reconfiguration Report and Order*, 19 FCC Rcd at 15042, ¶ 133.

the Commission's rules.⁵⁴ Under that procedure, EA-based 800 MHz SMR licensees are required to respond to any notification of harmful interference reported by public safety licensees to that website within 24 hours.⁵⁵ Although the procedure in Section 90.674 is not identical to APCO's proposal, we find that it is adequate to address APCO's concerns, as this website will enable public safety licensees to report any harmful interference events at any time, 24 hours a day, and licensees are required to respond to any notification of harmful interference within 24 hours of receipt. Further, we do not anticipate that permitting EA-based 800 MHz SMR licensees to operate with wider channel bandwidths than currently permitted under Section 90.209 will result in an increase in harmful interference to public safety licensees. Accordingly, we decline to impose additional, largely duplicative requirements on EA-based 800 MHz SMR licensees.

19. CTO urges us to adopt an additional condition requiring EA-based 800 MHz SMR licensees to transmit a second notice to affected 800 MHz public safety licensees that would include the date on which operations will begin, the specific locations of antenna sites, and effective radiated power (ERP) for each antenna site.⁵⁶ CTO argues that the additional notice would ensure that public safety entities continue to be notified of changes near their operations.⁵⁷ While we find it appropriate to require licensees to include the approximate date of operation in their notifications, we decline to adopt the additional notice suggested by CTO. The notice requirement we adopt today is designed to provide notice to public safety licensees so that they may monitor their networks for any increase in harmful interference caused by EA-based 800 MHz SMR licensees that exceed the standard channel spacing and bandwidth limitation and take appropriate steps to initiate a process to remedy such interference should it occur. A notification requirement that includes antenna location or ERP would not further this goal. Therefore, we find that adopting a second notice requirement would result in little added benefit to public safety entities while imposing undue costs on EA-based 800 MHz SMR licensees.

20. We conclude that the 30-day notice condition, in combination with the limitation preventing EA-based 800 MHz SMR licensees from exceeding the channel spacing and bandwidth limitation in NPSPAC regions where reconfiguration is incomplete, adequately protects 800 MHz public safety licensees from harmful interference.⁵⁸

⁵⁴ 47 C.F.R. § 90.674. In the *800 MHz Reconfiguration Report and Order*, in which the Commission adopted Section 90.674, it required 800 MHz cellular system licensees (which includes EA-based 800 MHz SMR licensees) to create, within 30 days of the effective date of the rule, "a common electric means of receiving initial notification of interference complaints from non-cellular 800 MHz licensees." *800 MHz Reconfiguration Report and Order*, 19 FCC Rcd at 15042, ¶ 133. The result of that requirement is the 800 MHz Interference Notification Site. See *supra* note 52.

⁵⁵ 47 C.F.R. § 90.674(a)(3); *800 MHz Reconfiguration Report and Order*, 19 FCC Rcd at 15043, ¶ 136.

⁵⁶ CTO Reply Comments at 2.

⁵⁷ *Id.*

⁵⁸ The *Notice* also sought comment on proposals by the National Public Safety Telecommunications Council (NPSTC) and APCO seeking to impose a one megahertz separation between public safety operations and EA-based 800 MHz SMR operations that exceed the channel spacing and bandwidth limitation. *Notice*, 27 FCC Rcd at 2748, ¶ 15. Specifically, NPSTC suggested that the Commission impose a one megahertz guard band at 820-821/865-866 MHz between EA-based 800 MHz SMR operations and public safety operations where band reconfiguration is incomplete, while APCO proposed that EA-based 800 MHz SMR operations maintain a minimum one megahertz separation from any public safety operation in the upper portion of the interleaved band (*i.e.*, above 860 MHz) in the service area of the site. *Id.* APCO also recommended that EA-based 800 MHz SMR operations near a public safety system in a NPSPAC region where reconfiguration is incomplete must protect public safety operations "both on-channel and on the 12.5 kHz offset to the 5 dBu." *Id.* In response to the *Notice*, however, APCO acknowledges that the one megahertz separation is not warranted as the use of 1.25 MHz CDMA channels will result in a *de facto* buffer of one megahertz. See APCO Comments at 3. We therefore decline to adopt these proposed conditions.

C. Applicability and Sufficiency of Existing Part 90 Rules

21. We note that, while we find that the 30-day notice requirement and the continued application of the channel spacing and bandwidth limitation in 821-824/866-869 MHz in NPSPAC regions where reconfiguration is incomplete will help protect public safety operations from harmful interference, these measures are supplements to the existing technical rules in Part 90 governing EA-based 800 MHz SMR operations.⁵⁹ We continue to believe that our current rules provide appropriate safeguards against harmful interference, and we emphasize that, in providing greater flexibility with respect to the channel spacing and bandwidth limitation, we are not removing or revising any other technical rules that enable licensees to coexist within the 800 MHz band.

22. To the contrary, EA-based 800 MHz SMR licensees subject to this *Report and Order* must continue to comply with all other applicable rules in Part 90.⁶⁰ For example, licensees must continue to meet the OOB requirement in Section 90.691 on the outer channels of the licensee's block and the interior channels of the licensee's block adjacent to channels occupied by incumbent licensees.⁶¹ EA-based 800 MHz SMR licensees also must abide by strict protections against unacceptable interference to non-cellular 800 MHz licensees under Section 90.672.⁶² As noted, EA-based 800 MHz SMR licensees must continue to meet the co-channel separation requirements in Section 90.621.⁶³ Additionally, EA-based 800 MHz SMR licensees are strictly responsible for abating any unacceptable interference under Section 90.673, and must comply with the interference resolution procedures under Section 90.674.⁶⁴

23. EWA suggests we clarify the applicability of the rule change adopted in this *Report and Order* in the Canada border area, because the existing protection from EA-based 800 MHz SMR licensees to adjacent site-based systems "has always been calculated on a frequency-specific, co-channel contour basis."⁶⁵ We reiterate that EA-based 800 MHz licensees that exceed the channel spacing and bandwidth limitation are required to continue to comply with all other applicable Part 90 rules, including co-channel separation requirements.⁶⁶ As Sprint Nextel acknowledges, any action permitting operations on bandwidths greater than 25 kHz does not change the interference protection requirements applicable to public safety and other non-ESMR licensees in and adjacent to the U.S.-Canada border areas.⁶⁷

⁵⁹ See RCA Comments at 3; SouthernLINC Comments at 11-12; SouthernLINC Reply Comments at 6-7.

⁶⁰ EWA states its assumption that because the Commission will allow EA-based 800 MHz SMR licensees to exceed the channel spacing and bandwidth requirement in 813.5-824/858.5-869 MHz, such operation will not "present interference concerns for future users of the Guard Band spectrum [817-818/861-862 MHz] either." EWA Comments at 3. The *Notice* limited the applicability of the proposals to EA-based 800 MHz SMR operations and the record demonstrates no specific concern regarding potential interference issues to hypothetical future users of the guard band. To the extent that the guard band is licensed in the future, the Commission will establish applicable technical and service rules as necessary at that time.

⁶¹ 47 C.F.R. § 90.691.

⁶² *Id.* § 90.672. SouthernLINC argues this rule effectively establishes an even more stringent out-of-band emission requirement than Section 90.691. SouthernLINC Reply Comments at 7.

⁶³ 47 C.F.R. § 90.621(b).

⁶⁴ *Id.* §§ 90.673-90.674.

⁶⁵ EWA Comments at 3.

⁶⁶ 47 C.F.R. § 90.621(b).

⁶⁷ Sprint Nextel May 1, 2012 *Ex Parte* at 1-2. EA-based 800 MHz SMR licensees must continue to comply with Part 90 rules regarding operation in the Canada and Mexico border areas. See 47 C.F.R. § 90.619. Section 90.619 provides that EA-based 800 MHz SMR licensees must operate in accordance with international agreements with Canada and Mexico. 47 C.F.R. § 90.619(a).

24. Several commenters agree that, as a general matter, EA-based 800 MHz SMR licensees' continued compliance with the Part 90 rules will serve to protect all other 800 MHz licensees from harmful interference. For example, SouthernLINC argues that "the ongoing obligation of 800 MHz ESMR licensees to operate in strict compliance with these rules will continue to serve as yet another form of protection from interference for 800 MHz public safety licensee."⁶⁸ RCA notes that the Commission "has done much to ensure 800 MHz public safety licensees receive ample protection from broadband operations," specifically citing EA-based 800 MHz SMR licensees' obligation to abate interference to public safety systems and other 800 MHz licensees.⁶⁹

25. In this regard, Sprint Nextel argues that it has taken steps beyond what the Commission's rules require to minimize the risk of interference to public safety licensees.⁷⁰ Sprint Nextel asserts that it will incorporate "extremely tight" OOB requirements into its CDMA equipment to minimize the risk of harmful interference in areas where reconfiguration is complete,⁷¹ as well as provide aggressive OOB roll-off protection for public safety systems operating in 821-824/866-869 MHz.⁷² Sprint Nextel also asserts that numerous tests confirm that its CDMA deployment "should further reduce the already-low risk of intermodulation interference to 800 MHz band public safety systems."⁷³

26. A group of nine public safety entities (Public Safety Licensees) argues that the technical analysis provided by Sprint Nextel on the record is an "Intermodulation Interference test,"⁷⁴ and that without filtering specifications, the Public Safety Licensees are unable to verify Sprint Nextel's claimed OOB protections.⁷⁵ The Public Safety Licensees argue that without certainty regarding OOB levels, the Commission should require a greater demonstration of non-interference before revising the channel spacing and bandwidth limitation.⁷⁶ In response, Sprint Nextel states that it has previously provided detailed information regarding its OOB base station emissions mask requirements, as well as statements from each of its three equipment vendors affirming that Sprint Nextel's base stations are being designed to meet that mask.⁷⁷ Sprint Nextel argues that the risk of interference to public safety or other non-ESMR 800 MHz operators from Sprint Nextel's planned 800 MHz broadband operations will be the same or less than its current iDEN deployment.⁷⁸

27. We find no basis to conclude that EA-based 800 MHz SMR operations using bandwidths wider than 25 kHz must be subject to more stringent technical requirements than our rules in Part 90 currently impose. We believe that our existing Part 90 technical rules are sufficient to protect 800 MHz public safety licensees or other 800 MHz licensees from harmful interference from EA-based 800 MHz SMR operations that exceed the channel spacing and bandwidth limitation in Section 90.209. We believe

⁷⁶ *Id.* at 7-8.

⁷⁷ Sprint Nextel May 1, 2012 *Ex Parte* at 3. See also Sprint Nextel Public Notice Reply Comments at 8-10, Exhibits A-B.

⁷⁸ Sprint Nextel May 1, 2012 *Ex Parte* at 3.

that revising the Part 90 channel spacing and bandwidth limitation is unlikely to cause 800 MHz public safety licensees to experience increased harmful intermodulation interference due in part to the fact that, other things being equal, the use of wider channels generally spreads the available power across a much wider bandwidth than narrowband technologies, thereby lowering the level of intermodulation interference that might occur. As Sprint Nextel affirms on the record, its CDMA operations may decrease intermodulation interference relative to its iDEN operations.⁷⁹ Accordingly, we believe 800 MHz public safety licensees will not be subject to increased harmful interference when EA-based 800 MHz SMR licensees comply with or exceed the protections under existing technical requirements in Part 90.⁸⁰

28. The Public Safety Licensees also assert that the Commission should proactively ensure that interference will not occur, rather than have 800 MHz licensees rely on the interference abatement process in Section 90.673 if interference occurs.⁸¹ They argue that, although the interference may be resolved, the public safety licensee is stuck with the costs of finding, investigating, and participating in resolving interference under Section 90.673.⁸² As a general matter, our Part 90 rules are designed to proactively limit the possibility of harmful interference. Section 90.673 was created to further protect public safety licensees in the unforeseen event that harmful interference does occur, and we find no reason to revisit this rule in this *Report and Order*.⁸³ Absent information showing that 800 MHz public safety licensees will experience harmful interference as a result of this rule change, and such interference will result in significant costs, we find the measures taken in this *Report and Order* reasonably balance the interests of EA-based 800 MHz SMR licensees and 800 MHz public safety entities.⁸⁴

D. Other Issues

29. Finally, CTO and Roskos suggest we afford additional flexibility to licensees other than EA-based 800 MHz SMR licensees. CTO urges us to “treat all [800 MHz commercial] licensee’s [sic] equally and to develop plans which allow ‘contiguous use of spectrum’ to licensees to be able to provide similar and competing services in the Band.”⁸⁵ Roskos argues that we should find that any licensee under Part 90 with contiguous spectrum should be able to aggregate the channels and use them on a wideband basis so long as the operations do not raise OOB above an unacceptable level.⁸⁶ We find insufficient record support for these requests, and we decline to expand the scope of this *Report and Order*. As

⁷⁹ Sprint Nextel Public Notice Reply Comments at 9, Exhibits A-B.

⁸⁰ We note that Sprint Nextel is permitted under waiver or special temporary authority to exceed the channel spacing and bandwidth limitation prescribed by Section 90.209 in nine different markets covering large population centers. *See supra* note 21. Sprint Nextel has been able to exceed the channel spacing or bandwidth limitation in five of the markets for 11 months. We have not received any complaints of interference from any 800 MHz licensee as a result of Sprint Nextel’s operations in any of the markets to date.

⁸¹ Public Safety Licensees Comments at 8.

⁸² *Id.*

⁸³ *See 800 MHz Reconfiguration Report and Order*, 19 FCC Rcd at 15034-35, 15039-41 ¶¶ 115, 128-31.

⁸⁴ As discussed, the relatively small costs to 800 MHz public safety licensees and EA-based 800 MHz SMR licensees generated by the rule change herein are outweighed by the significant benefits generated from EA-based 800 MHz SMR licensees’ ability to deploy broadband wireless networks. Public safety licensees may experience some increase in cost relative to the status quo in order to monitor their networks for harmful interference, and EA-based 800 MHz SMR licensees will incur some cost to comply with the notice requirement adopted in this *Report and Order*. However, we find that the ability of EA-based 800 MHz SMR licensees to more efficiently utilize their spectrum to deploy new technologies, and consumers’ subsequent improved access to advanced wireless services, far outweigh these costs.

⁸⁵ CTO Reply Comments at 2.

⁸⁶ Roskos Comments at 2.

explained herein, this *Report and Order* is based upon the specific proposals in the *Notice* and the record developed in response to the *Notice*, and applies only to EA-based 800 MHz SMR operations in the 813.5-824/858.5-869 MHz segment of the 800 MHz band.

E. Conclusion

30. We find that the record strongly supports our decision to provide channel spacing and bandwidth flexibility to EA-based 800 MHz SMR licensees, and that such flexibility will promote the deployment of advanced wireless technologies. The record demonstrates that the minimal costs incurred by EA-based 800 MHz SMR licensees and 800 MHz public safety licensees are far outweighed by the benefits generated through the elimination of this legacy rule, including improving spectrum efficiency and the availability of wireless broadband. We also find that the existing protections in our rules, coupled with the new protections added through this *Report and Order* are sufficient to limit the potential for harmful interference caused by EA-based 800 MHz SMR licensee operations at greater than 25 kHz channels with greater than 20 kHz bandwidth.

IV. PROCEDURAL MATTERS

A. Final Regulatory Flexibility Analysis

31. As required by the Regulatory Flexibility Act of 1980,⁸⁷ the Commission has prepared a Final Regulatory Flexibility Analysis (FRFA) of the possible significant economic impact on small entities of the policies and rules addressed in this document. The FRFA is set forth in Appendix C.

B. Final Paperwork Reduction Act Analysis

32. This document adopts new or revised information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA).⁸⁸ The requirements were submitted to the Office of Management and Budget (OMB) for review under Section 3507 of the PRA. The Commission published notice of the information collection in the *Federal Register*, and invited comment on the new information collection that we adopt in this document.⁸⁹ The requirements will not go into effect until OMB has approved the requirements and the Commission has published a notice announcing the effective date of the information collection requirements. In addition, we note that pursuant to the Small Business Paperwork Relief Act of 2002,⁹⁰ we previously sought specific comment on how the Commission might “further reduce the information collection burden for small business concerns with fewer than 25 employees.”

C. Congressional Review Act

33. The Commission will send a copy of this *Report and Order* to Congress and the Government Accountability Office pursuant to the Congressional Review Act.⁹¹

⁸⁷ 5 U.S.C. § 604.

⁸⁸ Pub. L. No. 104-13; 44 U.S.C. §§ 3501-3520.

⁸⁹ Channel Spacing and Bandwidth Limitations for Certain Economic Area (EA)-Based 800 MHz Specialized Mobile Radio Licensees, 77 Fed. Reg. 18991, 18994-96 (Mar. 29, 2012).

⁹⁰ Pub. L. No. 107-198; 44 U.S.C. § 3506(c)(4).

⁹¹ See 5 U.S.C. § 801(a)(1)(A).

V. ORDERING CLAUSES

34. Accordingly, IT IS ORDERED, that pursuant to the authority contained in Sections 1, 2, 4(i), 4(j), 301, 302, 303, 307, and 308 of the Communications Act of 1934, as amended, 47 U.S.C. §§ 151, 152, 154(i), 154(j), 301, 302a, 303, 307, and 308, this *Report and Order* IS ADOPTED and that Part 90 of the Commission's rules, 47 C.F.R. Part 90, is amended as set forth in Appendix B.

35. IT IS FURTHER ORDERED that the rules adopted herein WILL BECOME EFFECTIVE 30 days after the Commission publishes a summary of the *Report and Order* in the *Federal Register*.

36. IT IS FURTHER ORDERED that the Commission's Consumer & Governmental Affairs Bureau, Reference Information Center, SHALL SEND a copy of this *Report and Order*, including the Final Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

FEDERAL COMMUNICATIONS COMMISSION

Marlene H. Dortch
Secretary

APPENDIX B

Rules

The Federal Communications Commission amends Part 90 of Title 47 of the Code of Federal Regulations (CFR) as set forth below:

PART 90—Private Land Mobile Radio Service

1. The authority citation for Part 90 continues to read as follows:

AUTHORITY: Sections 4(i), 11, 303(g), 303(r), and 332(c)(7) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 161, 303(g), 303(r), 332(c)(7).

2. Section 90.209 is amended by adding paragraph (b)(7) as follows:

§ 90.209 Bandwidth limitations.

* * * * *

(b) * * *

(1) * * *

(7) Economic Area (EA)-based licensees in frequencies 817-824/862-869 MHz (813.5-824/858.5-869 MHz in the counties listed in section 90.614(c)) may exceed the standard channel spacing and authorized bandwidth listed in paragraph (b)(5) of this section in any National Public Safety Planning Advisory Committee Region when all 800 MHz public safety licensees in the Region have completed band reconfiguration consistent with this Part. In any National Public Safety Planning Advisory Committee Region where the 800 MHz band reconfiguration is incomplete, EA-based licensees in frequencies 817-821/862-866 MHz (813.5-821/858.5-866 MHz in the counties listed in section 90.614(c)) may exceed the standard channel spacing and authorized bandwidth listed in paragraph (b)(5) of this section. Upon all 800 MHz public safety licensees in a National Public Safety Planning Advisory Committee Region completing band reconfiguration, EA-based 800 MHz SMR licensees in the 821-824/866-869 MHz band may exceed the channel spacing and authorized bandwidth in paragraph (b)(5) of this section. Licensees authorized to exceed the standard channel spacing and authorized bandwidth under this paragraph must provide at least 30 days written notice prior to initiating such service in the bands listed herein to every 800 MHz public safety licensee with a base station in an affected National Public Safety Planning Advisory Committee Region, and every 800 MHz public safety licensee with a base station within 113 kilometers (70 miles) of an affected National Public Safety Planning Advisory Committee Region. Such notice shall include the estimated date upon which the EA-based 800 MHz SMR licensee intends to begin operations that exceed the channel spacing and authorized bandwidth in paragraph (b)(5) of this section.

APPENDIX C

Final Regulatory Flexibility Analysis

1. As required by the Regulatory Flexibility Act of 1980, as amended (RFA),¹ an Initial Regulatory Flexibility Analysis (IRFA) was included in the *Notice of Proposed Rulemaking* in WT Docket Nos. 11-110, 12-64.² The Commission sought written public comment on the proposals in these dockets, including comment on the IRFA. This Final Regulatory Flexibility Analysis (FRFA) conforms to the RFA.³

A. Need for, and Objectives of, the Report and Order

2. The rule adopted in this *Report and Order* eliminates a legacy channel spacing and bandwidth limitation governing Economic Area (EA)-based 800 MHz specialized mobile radio (SMR) licensees. This rule provides the licensees with the flexibility to deploy competitive wireless services, while also continuing to protect 800 MHz public safety licensees and other 800 MHz licensees from harmful interference.

3. The rule allows EA-based 800 MHz SMR licensees in the 813.5-824/858.5-869 MHz band segment⁴ to exceed the channel spacing and bandwidth limits in Section 90.209 of the Commission's rules, subject to conditions. EA-based 800 MHz SMR licensees may exceed the channel spacing and bandwidth limitation in the 813.5-824/858.5-869 MHz band segment of the 800 MHz band in National Public Safety Planning Advisory Committee (NPSPAC) regions where 800 MHz reconfiguration is complete. In NPSPAC regions where 800 MHz reconfiguration is incomplete, EA-based 800 MHz licensees may exceed the channel spacing and bandwidth limitation only in 813.5-821/858.5-866 MHz. Upon all 800 MHz public safety licensees in a region completing band reconfiguration, EA-based 800 MHz SMR licensees in 821-824/866-869 MHz may also exceed the channel spacing and bandwidth limitation. We also require EA-based 800 MHz SMR licensees to provide 30 days written notice to 800 MHz public safety licensees with base stations in a NPSPAC region where an EA-based 800 MHz SMR licensee intends to exceed the channel spacing and bandwidth limitation, and to public safety licensees with base stations within 113 kilometers (70 miles) of an affected NPSPAC region border. Finally, we require such notice to include the estimated date the EA-based 800 MHz SMR licensee's operations will exceed the channel spacing requirement and bandwidth limitation.

¹ See 5 U.S.C. § 603. The RFA, see 5 U.S.C. § 601-12., has been amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), Pub. L. No. 104-121, Title II, 110 Stat. 857 (1996), and the Small Business Jobs Act of 2010, Pub. L. No. 111-240, 124 Stat. 2504 (2010).

² See Improving Spectrum Efficiency Through Flexible Channel Spacing and Bandwidth Utilization for Economic Area-based 800 MHz Specialized Mobile Radio Licensees; Request for Declaratory Ruling that the Commission's Rules Authorize Greater than 25 kHz Bandwidth Operations in the 817-824/862-869 MHz Band, WT Docket No. 12-64, WT Docket No. 11-110, *Notice of Proposed Rulemaking*, 27 FCC Rcd 2742 (2012) (*Notice*).

³ See 47 C.F.R. § 604.

⁴ Licensees may operate 800 MHz high density cellular systems in the band segment 813.5-824/858.5-869 MHz only in the counties listed in Section 90.614(c) of the Commission's rules. See 47 C.F.R. §§ 90.7, 90.614(c). In the rest of the United States and its territories, except the Canada and Mexico border areas, licensees may operate 800 MHz high density cellular systems in the 817-824/862-869 MHz band segment. See *id.* §§ 90.7, 90.614(a)-(b), 90.619. Accordingly, the discussion and rule adopted herein apply to the 813.5-824/858.5-869 MHz band segment in the Southeastern United States as specified in Section 90.614(c), and to the 817-824/862-869 MHz band segment in other areas of the United States. See *id.* § 90.614(a)-(c).

4. We believe this rule will reduce barriers to innovation and investment and allow EA-based 800 MHz SMR licensees to deploy competitive wireless services, to consumers' benefit. The record demonstrates support for the rule change, and demonstrates that it will result in significant benefits while imposing minimal costs on EA-based 800 MHz SMR licensees, 800 MHz public safety licensees, or other 800 MHz licensees.

B. Statement of Significant Issues Raised by Public Comments in Response to the IRFA

5. There were no public comments filed that specifically addressed the rules and policies proposed in the IRFA.

C. Response to Comments by the Chief Counsel for Advocacy of the Small Business Administration

6. Pursuant to the Small Business Jobs Act of 2010, the Commission is required to respond to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration, and to provide a detailed statement of any change made to the proposed rules as a result of those comments. The Chief Counsel did not file any comments in response to the proposed rules in this proceeding.

D. Description and Estimate of the Number of Small Entities to Which the Rules Will Apply

7. The RFA directs agencies to provide a description of, and where feasible, an estimate of the number of small entities that may be affected by the proposed rules, if adopted.⁵ The RFA generally defines the term "small entity" as having the same meaning as the terms "small business," "small organization," and "small governmental jurisdiction."⁶ In addition, the term "small business" has the same meaning as the term "small-business concern" under the Small Business Act.⁷ A small-business concern" is one which: (1) is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA.⁸

8. *Small Businesses, Small Organizations, and Small Governmental Jurisdictions.* Our action may, over time, affect small entities that are not easily categorized at present. We therefore describe here, at the outset, three comprehensive, statutory small entity size standards.⁹ First, nationwide, there are a total of approximately 27.5 million small businesses, according to the SBA.¹⁰ In addition, a "small organization" is generally "any not-for-profit enterprise which is independently owned and operated and is not dominant in its field."¹¹ Nationwide, as of 2007, there were approximately 1,621,315

⁵ See 5 U.S.C. § 603(b)(3).

⁶ See *id.* § 601(6).

⁷ See *id.* § 601(3) (incorporating by reference the definition of "small-business concern" in the Small Business Act, 15 U.S.C. § 632). Pursuant to 5 U.S.C. § 601(3), the statutory definition of a small business applies "unless an agency, after consultation with the Office of Advocacy of the Small Business Administration and after opportunity for public comment, establishes one or more definitions of such term which are appropriate to the activities of the agency and publishes such definition(s) in the Federal Register."

⁸ See 15 U.S.C. § 632.

⁹ See 5 U.S.C. §§ 601(3)–(6).

¹⁰ See SBA, Office of Advocacy, "Frequently Asked Questions," <http://web.sba.gov/faqs> (last visited May 6, 2011; figures are from 2009).

¹¹ 5 U.S.C. § 601(4).

small organizations.¹² Finally, the term “small governmental jurisdiction” is defined generally as “governments of cities, towns, townships, villages, school districts, or special districts, with a population of less than fifty thousand.”¹³ Census Bureau data for 2011 indicate that there were 89,476 local governmental jurisdictions in the United States.¹⁴ We estimate that, of this total, as many as 88,506 entities may qualify as “small governmental jurisdictions.”¹⁵ Thus, we estimate that most governmental jurisdictions are small.

9. *Wireless Telecommunications Carriers (except Satellite)*. Since 2007, the SBA has recognized wireless firms within this new, broad, economic census category.¹⁶ Prior to that time, such firms were within the now-superseded categories of Paging and Cellular and Other Wireless Telecommunications.¹⁷ Under the present and prior categories, the SBA has deemed a wireless business to be small if it has 1,500 or fewer employees.¹⁸ For this category, census data for 2007 show that there were 1,383 firms that operated for the entire year.¹⁹ Of this total, 1,368 firms had 999 or fewer employees, and 15 had 1,000 employees or more.²⁰ Similarly, according to Commission data, 413 carriers reported that they were engaged in the provision of wireless telephony, including cellular service, Personal Communications Service (PCS), and Specialized Mobile Radio (SMR) Telephony services.²¹ Of these, an estimated 261 have 1,500 or fewer employees, and 152 have more than 1,500 employees.²² Consequently, the Commission estimates that approximately half or more of these firms can be considered small. Thus, using available data, we estimate that the majority of wireless firms can be considered small.

10. *Specialized Mobile Radio*. The Commission awards small business bidding credits in auctions for Specialized Mobile Radio (“SMR”) geographic area licenses in the 800 MHz and 900 MHz

¹³ 5 U.S.C. § 601(5).

¹⁴ U.S. CENSUS BUREAU, STATISTICAL ABSTRACT OF THE UNITED STATES: 2011, Table 427 (2007).

¹⁵ The 2007 U.S. Census data for small governmental organizations are not presented based on the size of the population in each such organization. There were 89,476 small governmental organizations in 2007. If we assume that county, municipal, township and school district organizations are more likely than larger governmental organizations to have populations of 50,000 or less, the total of these organizations is 52,125. If we make the same assumption about special districts, and also assume that special districts are different from county, municipal, township, and school districts, in 2007 there were 37,381 special districts. Therefore, of the 89,476 small governmental organizations documented in 2007, as many as 89,506 may be considered small under the applicable standard. This data may overestimate the number of such organizations that has a population of 50,000 or less. U.S. CENSUS BUREAU, STATISTICAL ABSTRACT OF THE UNITED STATES 2011, Tables 427, 426 (Data cited therein are from 2007).

²² See *id.*

bands to entities that had revenues of no more than \$15 million in each of the three previous calendar years.²³ The Commission awards very small business bidding credits to entities that had revenues of no more than \$3 million in each of the three previous calendar years.²⁴ The SBA has approved these small business size standards for the 800 MHz and 900 MHz SMR Services.²⁵ The Commission has held auctions for geographic area licenses in the 800 MHz and 900 MHz bands. The 900 MHz SMR auction was completed in 1996.²⁶ Sixty bidders claiming that they qualified as small businesses under the \$15 million size standard won 263 geographic area licenses in the 900 MHz SMR band.²⁷ The 800 MHz SMR auction for the upper 200 channels was conducted in 1997. Ten bidders claiming that they qualified as small businesses under the \$15 million size standard won 38 geographic area licenses for the upper 200 channels in the 800 MHz SMR band.²⁸ A second auction for the 800 MHz band was conducted in 2002 and included 23 BEA licenses. One bidder claiming small business status won five licenses.²⁹

11. The auction of the 1,053 800 MHz SMR geographic area licenses for the General Category channels was conducted in 2000. Eleven bidders that won 108 geographic area licenses for the General Category channels in the 800 MHz SMR band qualified as small businesses under the \$15 million size standard.³⁰ In an auction completed in 2000, a total of 2,800 Economic Area licenses in the lower 80 channels of the 800 MHz SMR service were awarded.³¹ Of the 22 winning bidders, 19 claimed small business status and won 129 licenses. Thus, combining all three auctions, 40 winning bidders for geographic licenses in the 800 MHz SMR band claimed status as small business.

12. In addition, there are numerous incumbent site-by-site SMR licensees and licensees with extended implementation authorizations in the 800 and 900 MHz bands. We do not know how many firms provide 800 MHz or 900 MHz geographic area SMR pursuant to extended implementation authorizations, nor how many of these providers have annual revenues of no more than \$15 million. One firm has over \$15 million in revenues. In addition, we do not know how many of these firms have 1,500 or fewer employees.³² We assume, for purposes of this analysis, that all of the remaining existing extended implementation authorizations are held by small entities, as that small business size standard is approved by the SBA.

E. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements for Small Entities

13. The rule provides regulatory flexibility to all EA-based 800 MHz SMR licensees. The rule will impose limited reporting or recordkeeping requirements to the extent an EA-based 800 MHz SMR licensee seeks to exceed the channel spacing and bandwidth limitation in Section 90.209 of the Commission's rules. In such cases, the licensee must provide 30 days advanced written notice to all public safety licensees with a base station in an affected NPSPAC region and within 113 kilometers (70 miles) of the border of an affected NPSPAC region. This notice must include the estimated date that the EA-based 800 MHz SMR licensee's operations will exceed the channel spacing and bandwidth limitation. Otherwise, the rule will impose only a small compliance burden.

F. Steps Taken to Minimize the Significant Economic Impact on Small Entities, and Significant Alternatives Considered

14. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): (1) the establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.³³

15. The *Report and Order* is deregulatory in nature and imposes only a minor compliance requirement on all affected entities, including small entities. In recognition of the resources available to small entities, and in the interest of simplified compliance obligations, the *Report and Order* does not mandate any specific form or manner in which entities must comply with the reporting requirement. Specifically, the *Report and Order* requires EA-based 800 MHz SMR licensees to provide written notice to all public safety licensees with a base station in a affected NPSPAC region and within 113 kilometers (70 miles) of the border of an affected NPSPAC region if the licensee intends to exceed the channel spacing and bandwidth limitation. This notice must include the estimated date that the EA-based 800 MHz SMR licensee's operations will exceed the channel spacing and bandwidth limitation. Licensees have the flexibility to provide written notice through whatever means the licensee chooses. We believe this notice is necessary to ensure that public safety licensees are aware of the operation and can actively monitor for any interference issues that may arise. While we strive to provide flexibility to small entities, because we believe that protection of public safety licensees is essential and in the public interest, we do not adopt any exemption for small entities.

G. Federal Rules that May Duplicate, Overlap, or Conflict with the Rules

16. None.

³³ See 5 U.S.C. § 603(c).

**STATEMENT OF
CHAIRMAN JULIUS GENACHOWSKI**

Re: Improving Spectrum Efficiency Through Flexible Channel Spacing and Bandwidth Utilization for Economic Area-based 800 MHz Specialized Mobile Radio Licensees, WT Docket No. 12-64; Request for Declaratory Ruling that the Commission's Rules Authorize Greater than 25 kHz Bandwidth Operations in the 817-824/862-869 MHz Band, WT Docket No. 11-110.

This is another action forward in our work to ensure that mobile broadband is an ongoing, strong driver of economic growth and opportunity in the United States.

Mobile broadband is changing the world for the better, and the U.S. is leading the way. We have now regained global leadership in mobile. American-designed apps and services are being adopted faster than any others, both inside and outside our borders.

After years of seeing countries developing popular mobile applications ahead of us, the U.S. mobile innovation economy is now the envy of the world. And we are ahead of the world in deploying 4G mobile broadband at scale – with 64% of the world's 4G LTE subscribers here in the U.S.

To maintain and to extend our leadership, we have challenges to address, and a major priority of the Commission remains addressing the challenges to unleashing mobile innovation and making sure America continues to lead the world in mobile.

To that end, we are pursuing a strong Mobile Action Plan, which focuses on five core elements: freeing up new spectrum for licensed and unlicensed use; removing barriers to mobile infrastructure build-out and mobile broadband spectrum use; driving greater efficiency in spectrum, networks, devices; promoting competition; and empowering consumers.

Already, we're unleashing at least 25 megahertz of spectrum in the wireless communications (WCS) band by removing technical rules that had impeded use. We're in process to remove regulatory barriers to enable 40 megahertz of satellite spectrum to be used for land-based mobile broadband. And we became the first country in the world to open up the white spaces for new and innovative unlicensed uses.

We've also become the first country to authorize voluntary incentive auctions, designed to unleash significant amounts of prime spectrum for mobile broadband.

Today's order is part of our action plan. We are removing outdated rules that are serving as barriers to spectrum use for mobile broadband in the 800 MHz band.

Specifically, the order will allow Enhanced Specialized Mobile Radio licensees in this band, such as Sprint and SouthernLINC, to operate across contiguous channels without a rigid channel spacing requirement or a bandwidth limitation. This will enable the transition of their networks to CDMA and LTE technologies.

The end result permits flexibility that will enable the use of additional spectrum for mobile broadband, thus creating more investment, more innovation, and more benefits flowing to the American people. And we are accomplishing this goal while ensuring that important public safety uses in the 800 MHz band are protected from interference.

This item promotes mobile broadband, and modifies outdated rules to enable efficient and flexible spectrum use. I want to thank the Wireless Bureau for their work on this item.

**STATEMENT OF
COMMISSIONER ROBERT M. McDOWELL**

Re: Improving Spectrum Efficiency Through Flexible Channel Spacing and Bandwidth Utilization for Economic Area-based 800 MHz Specialized Mobile Radio Licensees, WT Docket No. 12-64; Request for Declaratory Ruling that the Commission's Rules Authorize Greater than 25 kHz Bandwidth Operations in the 817-824/862-869 MHz Band, WT Docket No.11-110.

I am pleased to vote to approve this order, which modernizes a legacy rule thereby paving the way for increased spectral efficiency, as well as technical flexibility to invest in, develop and deploy wideband services in portions of the 800 MHz band. Our new rule strikes a balance between maximizing efficiency – and therefore allowing consumers to benefit from faster mobile speeds and a greater array of services on the one hand – while protecting 800 MHz public safety licensees from harmful interference on the other hand. While we are just beginning to sort through the complex issues associated with freeing up more spectrum for the longer term, I am pleased that we have taken another small step today to allow wireless providers to take better advantage of the spectrum already available in the market.

I thank the parties that contributed to our record, as well as the staff of the Wireless Telecommunications Bureau for your work today.

**STATEMENT OF
COMMISSIONER MIGNON L. CLYBURN**

Re: Improving Spectrum Efficiency Through Flexible Channel Spacing and Bandwidth Utilization for Economic Area-based 800 MHz Specialized Mobile Radio Licensees, WT Docket No. 12-64; Request for Declaratory Ruling that the Commission's Rules Authorize Greater than 25 kHz Bandwidth Operations in the 817-824/862-869 MHz Band, WT Docket No. 11-110.

With today's Order, the Commission takes another important step towards facilitating the use of more spectrum for mobile broadband service. By removing the channel spacing and bandwidth limitations in our Part 90 rules, we are enabling mobile service providers with certain 800 MHz licenses to transition from narrow band operations to networks that can support the most advanced mobile broadband services. Since some of these providers have SMR licenses that cover the entire country, these technical rule changes should result in improved service and more innovative offerings for many consumers. This will enhance the ability of these companies to respond to ever increasing consumer demand for innovative services. It will also promote deployment of advanced wireless services to rural, unserved, and underserved areas.

In order to arrive at today's rule changes, the Commission had to carefully consider any impact on public safety communications. This is because a number of public safety licensees are still in the process of transitioning their networks to the frequencies that the Commission adopted in 2004, in order to address interference, that commercial mobile providers were causing public safety operations. Today's Order properly adopts measures, such as a 30-day notice procedure and other technical requirements, to ensure that these rule changes will not harm public safety communications.

I commend the Wireless Bureau for working so diligently to prepare this Order just two months after we adopted the Notice of Proposed Rulemaking that initiated this proceeding.

**STATEMENT OF
COMMISSIONER JESSICA ROSENWORCEL**

Re: *Improving Spectrum Efficiency Through Flexible Channel Spacing and Bandwidth Utilization for Economic Area-based 800 MHz Specialized Mobile Radio Licensees, WT Docket No. 12-64; Request for Declaratory Ruling that the Commission's Rules Authorize Greater than 25 kHz Bandwidth operations in the 817-824/862-869 MHz Band, WT Docket No. 11-110.*

For all of the technical complexity of this Order, it is actually about something very simple. This is about clearing out old spectrum policies and unlocking the possibilities that come with more efficient spectrum use. More precisely, by eliminating unnecessary technical restrictions and adding flexibility to the rules for 800 MHz Enhanced Specialized Mobile Radio operations, we are enabling commercial licensees in the band to deploy more advanced 3G and 4G services. This means more innovation. It means more investment. Moreover, it does all of this while recognizing the importance of protecting public safety operations during the ongoing 800 MHz public safety reconfiguration. I support it.

**STATEMENT OF
COMMISSIONER AJIT V. PAI**

Re: *Improving Spectrum Efficiency Through Flexible Channel Spacing and Bandwidth Utilization for Economic Area-based 800 MHz Specialized Mobile Radio Licensees, WT Docket No. 12-64; Request for Declaratory Ruling that the Commission's Rules Authorize Greater than 25 kHz Bandwidth Operations in the 817-824/862-869 MHz Band, WT Docket No. 11-110.*

Today's Report and Order illustrates the need for the Commission to review its rules regularly and assess whether they continue to be necessary in light of changing technological and/or market conditions. In this item, we remove certain channel spacing and bandwidth limitations in the 800 MHz band that may have made sense almost twenty years ago but currently stand in the way of mobile broadband deployment. I am pleased that we are taking this step in a thoughtful manner that will both benefit American consumers (including those in rural and underserved areas) and protect public safety operations.

I commend Sprint for raising this issue with the Commission and encourage others in the private sector to call our attention to similarly outdated regulatory barriers to investment and broadband deployment. I pledge to examine such proposals promptly and to work with my colleagues so that we can remove additional obstacles to broadband deployment at future Commission meetings.

I thank the staff of the Wireless Telecommunications Bureau for their swift and skillful work in crafting this item, thus allowing us to act on Sprint's proposal in a timely manner.
