Subject: Successful Launch

At 12:29 pm today, SkyTerra-1 was launched aboard an ILS Proton M launch vehicle. Nine hours and 14 minutes later, precisely on schedule, SkyTerra-1 separated successfully from the ILS launch vehicle and was placed into its geosynchronous transfer orbit. Boeing and LightSquared have acquired telemetry over SkyTerra-1, and it has hit the bullseye for injection into transfer orbit.

The successful launch of SkyTerra-1 represents the culmination of years of work and hundreds of millions of dollars of investment. We are deeply satisfied to have met our milestones, and to take this next major step forward towards bringing a nationwide, truly integrated MSS/ATC service to the United States. Certainly, this is exciting news as we continue our discussions with customers and about our infrastructure build. We truly appreciate all of your work with us to make this possible. Thank you.
