As the nation's first wholesale-only integrated wireless broadband and satellite network, **LightSquared** will provide wireless broadband capacity to a diverse group of customers, including retailers; wireline and wireless communication service providers; cable operators; device manufacturers; web players; content providers; and many others. The **LightSquared** network will allow these partners to offer satellite-only, terrestrial-only, or integrated satellite-terrestrial services to their end users.

*(Full note attached)*

## GPS-LightSquared Interference: An Old Issue, But a Real Issue

- The GPS industry has launched a full frontal assault on LightSquared's application to modify its MSS-ATC license to authorize a wholesale hybrid service, with retailers permitted to offer terrestrial-only handsets. The GPS industry and users -- including Departments of Defense, Transportation, and Homeland Security -- have raised claims of interference and called on the FCC to defer acting on LightSquared's application until the interference issues are satisfactorily addressed.
- We understand that the interference issues are real and complex, but may be resolvable. We believe the FCC wants to continue to support LightSquared's wholesale model and the repurposing of the MSS spectrum for wireless broadband. And LightSquared has several important arguments in its favor: the fact that the FCC National Broadband Plan counted the L-band MSS spectrum toward the goal of making more wireless broadband spectrum available; that the FCC granted LightSquared's license application subject to aggressive deadlines for building out a 4G-LTE network which necessarily included expansion of base stations; and that the GPS operators are seeking protection from interference in LightSquared's own spectrum, have a history of seeking extraordinary protection, and are coming late to the issue. But all that said, the government will likely not allow a service as ubiquitous and critical as GPS to suffer significant interference.
- The best-case scenario for LightSquared at this point -- and in our view the most likely -- is that the FCC grants LightSquared's modification, and establishes a process to identify the scope of the interference problem and ways to mitigate it before LightSquared initiates operations. The worst-case scenario is that the FCC defers acting on the modification until the GPS interference is resolved, likely accompanied by an extension of their 2012 buildout deadline, if necessary.
- As we understand it, the interference problem stems from two sources, and they're important to understand as we believe LightSquared will assume at least some responsibility to mitigate it. First, and more easily addressed, is interference from LightSquared base stations that are positioned on the same towers as GPS satellite receivers. This is more readily solved because the number (and location) of base stations is identifiable and limited.

- The second, and more serious and complicated interference issue, is caused by the fact that at least some mobile GPS terrestrial receivers contain no or inadequate filters. Not only are they then subject to interference from signals leaking into the GPS band, they also are claiming the need to be protected from interference from signals contained in the MSS band. The large number of GPS receivers, most of which are mobile, makes the technical solution more difficult. The fact that GPS is claiming protection from interference outside their own band makes the equities and precedent troublesome.
- The potential for GPS-MSS interference has been recognized since at least 2003 when the FCC granted the initial ATC approval. But NTIA (Dept. of Commerce agency), in its recent letter to the FCC, stressed that as the plan for terrestrial-ATC service has grown, so has the risk of interference.
- We understand that LightSquared has proposed to NTIA that it would organize an industry group – including telecom, GPS, chipset and device manufacturers -- to analyze the scope of interference and develop technical solutions, with an initial report due in six months, and \$20 million committed to fund the group and its work.
- If the FCC decides to approve the LightSquared modification, subject to a process to identify and resolve interference, we would expect it to issue a decision relatively promptly.
