2008 International Telecommunications Data

March 2010

Introduction

This is the Federal Communications Commission's (FCC's) annual report compiling data on telecommunications service between the United States and international points. The data compiled in this report are for the year 2008. The data are compiled from reports submitted to the FCC by U.S. carriers pursuant to Section 43.61 of the Commission's rules.¹ Section 43.61(a) directs carriers to file reports by July 31 which summarize international telecommunications service provided during the preceding calendar year. Carriers submit corrections of the data by October 31. The specific filing requirements are set forth in the *Manual for Filing Section 43.61 Data* (June 1995).

Statistical Findings

- U.S.-billed minutes increased 7.0% from 70.0 billion in 2007 to 74.9 billion in 2008.
- In 2008, 77 U.S. facilities-based and facilities-resale carriers (*see* definitions on page 3) together reported that they billed \$6.5 billion for international telephone service, and \$816 million for international private line and other miscellaneous services, compared to \$6.5 billion and \$717 million, respectively, in 2007.
- U.S. carriers' net settlement payments – the amount paid to foreign carriers to compensate those carriers for completing calls – decreased slightly from \$3.4 billion in 2007 to \$3.3 billion in 2008.
- Retained international revenues – revenues billed by U.S. carriers, less settlement amounts owed to foreign carriers for U.S.-billed traffic, plus settlement amounts due to U.S. carriers for foreign-billed traffic – increased 1.4% from \$3.9 billion in 2007 to \$4.0 billion in 2008.
- Pure resale providers resell the services of underlying U.S. facilities-based and facilities-resale carriers. The number of reporting pure resale carriers grew 10% from 1,068 in 2007 to 1,175 in 2008. Pure resale minutes grew from 75.8 billion in 2007 to 86.7 billion in 2008. Billed revenues increased from \$7.0 billion in 2007 to \$8.5 billion in 2008.

Table 1 summarizes the traffic and revenue data reported by all U.S. facilities-based and facilities-resale carriers for 2008, but does not include pure resale service. These categories are explained below.

¹ The Commission's data collection rules under 47 C.F.R. § 43.61 are the subject of a pending Notice of Proposed Rulemaking. *See Reporting Requirements for U.S. Providers of International Telecommunications Services; Amendment of Part 43 of the Commission's Rules*, IB Docket 04-112, Notice of Proposed Rulemaking, 19 FCC Rcd 6460 (2004) (*International Reporting Requirements Reform NPRM*)(proposing modifications to the Section 43.61 and 43.82 international data collection rules).

Table 1. International Telecommunications Traffic Measures and Revenues, 2008

	Traffic Measures*	Revenues Billed by U.S. Carriers (millions)	Net Settlements with Foreign Carriers (millions)	Net Retained Revenues** (millions)
Message Telephone (millions of minutes)	101,334	\$6,459	(\$3,329)	\$3,130
Private Line (number of circuits)	149,529	\$363	None	\$363
International Other Miscellaneous***		\$4	\$ (0)	\$4
Total****		\$7,275	(\$3,329)	\$3,946

* Traffic measures for international message telephone and other miscellaneous service include both U.S.-billed traffic and foreign-billed traffic that terminates in the United States, but excludes most traffic that transits the United States.

** Net U.S. carrier retained revenues equal billed revenues plus settlement amounts receivable from foreign carriers less amounts due to foreign carriers. See Table 3, below. Details may not match totals due to necessary rounding.

*** In 2008, carriers reported frame relay/ATM, virtual private line, TDM/TDMA, virtual private network, and packet switching services as other miscellaneous international services. That information can be found in Section C (International Miscellaneous Services, Page 1) of this report. Carriers use several different traffic measures when reporting the different types of international other miscellaneous services. Therefore, because they are not uniform, no overall totals are calculated for international other miscellaneous traffic measures or total traffic measures.

**** Total above includes \$5.2 billion billed revenues, \$2.1 billion net settlements, and \$3.1 billion net revenues for 30 facilities-based and facilities-resale carriers together requesting confidential treatment in the above categories.

Definitions

International services are provided either on a facilities-based, facilities-resale or pure resale basis. For categorizing traffic, **facilities-based** traffic refers to services provided using international transmission facilities owned in whole or in part by the carrier providing the service. Facilities-based carriers use one or more international channels of communication to provide international telecommunications service. An international channel (or circuit) is a wire or radio link that facilitates electronic communications between a U.S. point and a point outside the domestic United States (*see* Table 4, below). A facilities-based carrier is “a carrier that holds an ownership, indefeasible-right-of-user or leasehold interest in bare capacity in the U.S. end of an international facility, regardless of whether the underlying facility is a common carrier or non-common carrier submarine cable or a satellite system.” *See* 47 C.F.R. § 63.09(a). For categorizing traffic, **facilities-resale** traffic refers to services provided by a carrier utilizing international circuits leased from other reporting international carriers. The determination as to whether international private line services are reported as facilities-based or facilities-resale generally is based on the first international link of a circuit. If the carrier has an ownership interest in that link, or leases it from an entity that does not report that link, then service provided over that circuit will be reported as facilities-based. Otherwise, the international private line service should be reported as facilities-resale.

Carriers provide **pure resale** services by switching traffic to (and reselling the switched services of) underlying U.S. carriers. The underlying carriers control the circuit that carries the traffic to the international point, arrange for termination of the traffic, and report the traffic on a country-by-country basis in their own Section 43.61 reports. Table 2 shows that there are reduced reporting requirements for services provided on a pure resale basis. Some carriers report traffic carried over circuits that they own and those that they lease from other carriers, as well as traffic that they handle on a pure resale basis, *i.e.*, by reselling the switched services of underlying carriers. These carriers report detailed data for traffic that they carry over owned and resold circuits and summary data for switched traffic that they route to other U.S. carriers. Section D of this report has information on pure resale services. In 2008, 1,175 carriers reported that they provided international message telephone service on a pure resale basis. These pure resale providers billed customers \$8.5 billion for 86.7 billion minutes. Seventeen of these pure resale providers also reported international facilities-based and facilities-resale services.

Starting with the 1991 data filings, the Commission required carriers to file facilities-based traffic separately from pure resale traffic. Facilities-resale traffic was not separated from facilities-based traffic. Beginning with the 1995 data filings, the Commission required carriers to provide separate switched service and private line data for facilities-based and facilities resale services. At that time, a few carriers were offering international simple resale (ISR) services² which at that time consisted of telephone services provided over resold private lines, *i.e.*, on a facilities-resale basis. The Commission subsequently allowed carriers to provide ISR services using owned circuits as well as resold circuits. Beginning with the 1997 data filings, the Commission required carriers to separate switched services data by the settlement arrangements made with carriers in foreign countries for terminating that traffic. Carriers now classify switched service traffic as traditional settlement with proportionate return or as non-traditional settlement, including traffic hubbed

² The Commission eliminated its ISR policy in the *2004 International Settlements Policy Reform Order*. *See International Settlements Policy Reform, International Settlement Rates*, IB Docket No. 02-234, First Report and Order, 19 FCC Rcd 5709, 5723-25, paras. 26-31 (2004) (“*2004 International Settlements Policy Reform Order*”).

through an intermediate foreign country (see definitions on page 5).³ Carriers continue to report facilities-based and facilities-resale private line services separately.

Carriers must report switched traffic in three broad categories: U.S.-billed, foreign-billed, and transiting. **U.S.-billed** traffic includes all traffic billed by U.S. carriers, and includes calls that originate in the United States, calls that are placed collect or “caller toll-free” to the United States, U.S. carrier “country-direct” and “country-beyond” calls, and U.S. carrier reorigination traffic.

Country-direct and **country-beyond services** are U.S. carrier offerings that allow customers in foreign locations to route calls through U.S. carrier facilities to reach the United States (country-direct) or any world point (country-beyond). Country-direct and country-beyond services rely on alternative billing arrangements, such as credit cards, and enable the customer at a foreign point to be served by a U.S. carrier rather than by a foreign carrier. Note that U.S. carriers or their affiliates may operate in many foreign countries as foreign carriers. They do not report section 43.61 traffic for calls that they carry from one foreign country to another unless they carry this traffic through a U.S. point.

Reorigination traffic is traffic of a foreign carrier that transits a U.S. carrier’s facilities and terminates with another carrier in a foreign point. The carrier terminating the traffic in the foreign point views the traffic as U.S. traffic. Reorigination allows the originating foreign carrier to take advantage of the U.S. carrier’s accounting rate agreement with the carrier in the terminating country. The U.S. carrier treats reorigination traffic like U.S.-billed traffic when it settles with the carrier in the country of termination, and it reports this traffic as U.S.-billed traffic for filing purposes.

In their public filings, carriers include country-direct, country-beyond and reorigination traffic with other U.S.-billed traffic. In proprietary filings, carriers separate these services from other U.S.-billed traffic. Table A1 shows that carriers reported 75 billion minutes of U.S.-billed traffic in 2008, for which they billed \$6.5 billion. Table A25 shows that 64.3 billion of these minutes and \$5.5 billion of this revenue were for calls that originated in the United States or terminated collect or caller toll-free in the United States. Table A26 shows that 1.3 billion of these minutes and \$0.2 billion of this revenue was for country-direct and country-beyond type services. Table A27 shows that 9.3 billion of these minutes and \$0.8 billion of this revenue was for reorigination services billed to foreign carriers.

Foreign-billed traffic is all traffic billed by a foreign or correspondent carrier and includes most calls that originate at foreign points as well as collect and caller toll free calls placed by U.S. customers to foreign points. Foreign-billed calls do not necessarily originate in the country for which the traffic is reported. In some cases, foreign carriers reoriginate traffic for other foreign carriers. U.S. carriers may not know which calls are reoriginated.

Transiting traffic is traffic of a foreign carrier that transits a U.S. carrier's facilities and terminates with another carrier in a foreign point. Unlike reorigination traffic, transiting traffic is settled based on the settlement rate between the actual countries of origination and destination. Transiting traffic is billed by the originating foreign carrier, and settlement payments are reported by

³ See *Annual Section 43.61(a) International Telecommunications Traffic Reports Due by July 31, 2009*, Public Notice, 24 FCC Rcd 9072 (Int’l. Bur. 2009).

U.S. carriers for the country in which the service is billed. Where there are so-called “cascade billing arrangements,” U.S. carriers report both settlement receipts and settlement payments for transiting calls. In a cascade billing arrangement, the U.S. carrier collects from the originating foreign carrier both a transit fee and the settlement amount that the originating foreign carrier will owe to the terminating foreign carrier. The U.S. carrier then makes the settlement payment to the terminating foreign carrier.

As explained above, carriers separately report international switched telephone, telegraph, telex and miscellaneous services based on the financial termination arrangements. **Traditional Settlement Arrangements** consist of traffic settled pursuant to the Commission’s International Settlements Policy (ISP). The settlement is based on the accounting rate, which is part of a compensation agreement negotiated between a U.S. carrier and its foreign correspondent on a particular international route. The ISP requires nondiscriminatory accounting rates among U.S. carriers on a given route and that the U.S. carrier and its foreign correspondent share the accounting rate on a 50/50 basis. The ISP also requires that the U.S. carrier agree to accept no more than its proportionate share of return traffic from the foreign carrier. The ISP applies to agreements involving foreign carriers with market power on routes where the termination rates are above benchmark.⁴ Table A23 shows that U.S. carriers reported 4.4 billion minutes of U.S.-billed traditional settlement traffic in 2008, for which they billed \$0.3 billion.

Non-Traditional Settlement Arrangements consist of all traffic other than traditionally settled traffic. Table A24 shows that U.S. carriers reported 70.6 billion U.S.-billed non-traditional minutes of traffic in year 2008, for which they billed \$6.2 billion. U.S. carriers also reported receiving 24.1 billion foreign-billed non-traditional minutes of traffic in year 2008. These tables may understate the total amount of traffic settled under non-traditional arrangements because it appears that carriers continued to report a small amount of non-traditional settlement traffic as traditional settlement traffic for year 2008.⁵

Reporting Requirements

Different levels of reporting are used for different categories of service. Table 2 shows that

⁴ See 47 C.F.R. §§ 43.51(e), 64.1001, 64.1002 (2008). In 2004, the Commission lifted the ISP requirements from agreements involving foreign carriers that do not have market power and on routes where the termination rates for U.S.-international services were below benchmark. See *International Settlements Policy Reform, International Settlement Rates*, IB Docket No. 02-234, *First Report and Order*, 19 FCC Rcd 5709, 5723-25, paras. 27-28 (2004). Currently, 165 routes are exempted from the ISP. See http://www.fcc.gov/ib/pd/pf/isp_exempt.html. See also *U.S.-Cambodia Route Exempted from the International Settlements Policy*, Public Notice, IB Docket Nos. 02-324, 96-261, 20 FCC Rcd 963 (Int’l. Bur. 2005). For a discussion of benchmarks, see *International Settlement Rates*, IB Docket No. 96-261, Report and Order, FCC 97-280, 12 FCC Rcd 19806, 19806, ¶ 1 (1997); *Report and Order on Reconsideration and Order Lifting Stay*, 14 FCC Rcd 9256 (1999); aff’d sub nom. *Cable & Wireless P.L.C. v. FCC*, 166 F.3d 1224 (D.C. Cir. 1999).

⁵ For example, carriers reported 7.9 billion minutes of non-traditional settlement traffic for Canada, and 2.9 billion minutes for the United Kingdom. They also reported 1.6 billion and 2.2 billion, respectively, minutes of traditional settlement traffic for each country. The Commission has permitted non-traditional settlement arrangements for U.S.-Canada and U.S.-U.K. traffic since 1992 and 1994, respectively. It is therefore unlikely that carriers are in fact settling substantial amounts of traffic on these two U.S. international routes under traditional settlement arrangements. Traditional settled traffic is settled using the Commission’s ISP. Canada and the United Kingdom are currently exempt from the ISP.

carriers must report traffic and revenues on a country-by-country basis for the most commonly used communications services.

See notes to Table 2 below.

**Table 2. International Telecommunications Reporting Requirements -
Continued**

Notes:

- * Carriers may file world totals in lieu of country-by-country data for the smaller U.S. points identified in Table 4.
- ** Carriers are not required to file message counts for transiting traffic.
- *** Many carriers have requested proprietary treatment for country-by-country transiting minutes. Both U.S. and foreign carriers compete for transiting traffic. The minutes data would allow competitors to estimate contract revenues per minute. The published tables therefore contain region and world totals for transiting minutes.
- **** Prior to filing 1995 data, carriers selected their own traffic measures for miscellaneous services.

For private line services, carriers report the number of actual circuits leased to customers at year-end. Beginning with their 1995 international traffic data, carriers also report these circuits in terms of voice-equivalent circuits. For lower bandwidths, this means reporting the number of 64-kilobit-per-second channels that would equal the actual circuits. An 18-megahertz video channel, however, would be reported as 240 voice-equivalent channels; a 24-megahertz video channel would be reported as 288 voice-equivalent channels; and a 36-megahertz video channel would be reported as 630 voice-equivalent channels. This is the same conversion factor used by carriers in preparing circuit data reports filed pursuant to Section 43.82 of the Commission's rules.⁶ Voice-equivalent circuits are denoted "64 K" in the attached tables.

Facilities-based U.S. and foreign carriers jointly provide most international services. This is not always apparent to the customer, but is reflected in some of the traffic and revenue data that are filed. For switched services, one carrier collects from customers and then compensates its foreign partners through the settlement process. In the case of traditional settlement traffic, compensation is based on minutes of calling and on accounting rates specified in settlement agreements. The number of minutes used for settlement purposes is generally based on the number of conversation minutes. In many cases, accumulated seconds are used to determine the minutes used in settlements. In the case of Mexico, billed minutes are used to determine settlements. Carriers providing non-traditional traffic may have settlement-like arrangements under which U.S. carriers and their foreign correspondents compensate each other for traffic that originates or terminates at foreign points. Starting in 1991, for facilities-based and facilities-resale services, the Commission directed carriers to report the minutes used for settlement purposes.⁷ Pure resale carriers file billed minutes, since they do not participate in the

⁶ *Manual for Filing Section 43.82 Circuit Data in accordance with the FCC's Rules and Regulations*, October 1995, available from the FCC's Internet site at <http://www.fcc.gov/ib/pd/pf/csmanual.html>.

⁷ Prior to 1991, carriers were directed to report billed minutes, rather than settlement minutes. Billed minutes tend

settlement process and may not have access to settlement minutes data.

Country-beyond calls have two international legs. Our rules direct carriers to report both the originating and terminating legs of such calls. Consequently, approximately two minutes will be reported for each conversation minute. Each leg of the call may have settlement payments and these payments should be reported for the appropriate country. Carriers are instructed to report all billed revenues by the country in which the call originates. Country-direct and country-beyond traffic are treated confidentially and are not identified separately from a carrier's publicly filed data.

For U.S.-billed switched services, the tables show the amount that the customers are billed for service, the corresponding settlement amount that the carrier owes to its foreign partner, and the amount of revenues that it retains. Carriers are instructed to report the actual amount of revenues that they bill for service, net of discounts. Many carriers offer discount plans that entitle customers to discounts based on the customer's total bill. Some carriers do not recalculate discounted bill amounts on a call-by-call basis. These carriers collect country-by-country revenue totals based on non-discounted rates and must estimate the amount of discounts for each country.

For foreign-billed traffic, the tables show the settlement amounts owed to U.S. carriers by foreign carriers. The tables refer to these amounts as "Receipts from Foreign Carriers." In the case of transiting traffic, the U.S. carrier often receives a transit fee for itself, and a settlement amount which is owed to the terminating carrier. Thus, the tables show receipts, payouts and a net amount for transiting traffic. Table 3 shows the revenue relationships between U.S. carriers and foreign carriers.

Table 3. International Telecommunications Revenue Relationships

services. Unlike message telephone service, where the rate charged to consumers covers the whole cost of the call, the U.S. carrier's private line rate traditionally has covered only the half-circuit to the theoretical mid-point. In some cases, each carrier bills for its half of the service; in other cases, one carrier acts as the collection agent. The FCC Filing Manual states that U.S. carriers must report the amount of private line revenues that they record for their half of the service, regardless of who actually collects the revenues.⁸ The filing manual also states that U.S. carriers should not report revenues that they collect on behalf of the foreign carriers or amounts that they bill for services that they provide in foreign countries. In instances in which a U.S. carrier provides both halves of the circuit, the U.S. carrier should only submit information for the U.S. half portion of the circuit. The portion of the circuit or channel from the theoretical mid-point to the foreign destination is deemed to be foreign telecommunications and not to be reported by the U.S. carrier.

International points are grouped into ten regions for reporting purposes. The regions include all countries of the world as well as three maritime classifications - the Atlantic, Pacific, and other oceans. In some cases, international points have been grouped outside the geographic region for reporting purposes. For example, the Azores and Madeira Islands are included with Portugal. Any data reported to these points are included with Portugal traffic and are summarized with Western Europe traffic in the tables.⁹

Carriers are required to file separate data for each U.S. point that they serve. Alaska and Hawaii, for example, are considered distinct U.S. points for this purpose. Table 4 identifies the U.S. points used for reporting purposes. Carriers serving larger U.S. points are required to file detailed country-by-country data on computer disk. Carriers serving smaller U.S. points may file world totals in lieu of country-by-country data. In a few instances, carriers have obtained waivers so that they can consolidate data for Hawaii and the conterminous United States.¹⁰

Table 4 shows which U.S. points are classified as **domestic** and which are classified as **other**. Calls between domestic U.S. points are considered domestic and therefore are not reported. Calls between domestic U.S. points and other U.S. points are defined as international and are reported. For example, a directly dialed call originating in Guam and terminating in Hawaii is reported by the carrier serving Guam as U.S.-billed traffic to Hawaii. Note that a carrier serving Hawaii reports this same call as a foreign-billed call from Guam.¹¹

Presentation of Data

Table 5 lists the carriers whose data are presented in the attached tables. Table 6 summarizes the billed revenue data contained in the tables, and Table 7 summarizes the net revenue data contained in the tables (billed revenues net of settlement payments).

This report summarizes Section 43.61 data for all reporting carriers and for all U.S. points. Some tables show totals for all carriers serving individual U.S. points. Other tables show totals for all data filed by individual carriers. Data have been consolidated where a holding company owns more than one carrier. For example, the data EPM Telecomunicaciones S.A. E.S.P. reported for its subsidiary, Cinco Telecom Corporation, have been consolidated and included with other EPM Telecomunicaciones S.A. E.S.P. data. This report organizes the country-by-country data by region of the world. The foreign points are listed alphabetically in each region.

¹¹ Thus, our aggregate call statistics double-count both the call and the associated minutes. Table A1 shows that U.S. carriers reported 15.0 billion calls between the U.S. and international points. Of these calls, 21 million (less than 1%) were reported for traffic between U.S. points. Thus, the double-counting is small when compared to the overall number of calls. The *International Reporting Requirements Reform NPRM* proposes to eliminate the requirement that carriers report traffic between U.S. points. See *supra* n.1.

U.S. carriers are required to file message and minute counts for switched services that originate or terminate at a U.S. point. They are required to report only minutes for traffic that transits U.S. points, though, because U.S. carriers sometimes have difficulty obtaining message counts for traffic billed by foreign telephone companies. As noted in Table 2, transiting minutes are not published on a country-by-country basis. Region totals are provided for those regions where transiting traffic is carried from more than one country.

Carriers file detailed traffic data using a record format contained in the filing manual. For switched services, each record contains a billing type code that signifies the traffic exchange method (e.g., traditional settlement vs. non-traditional settlement) and whether the call was U.S.-billed, foreign-billed, or transiting. For U.S.-billed calls, the billing type code indicates whether the data represents (a) U.S.- originated traffic and U.S.-terminated collect and subscriber toll free traffic; (b) country-direct and country-beyond traffic; or (c) U.S. carrier reorigination traffic. For international private line services, the billing type code signifies whether the data contain facilities-based or facilities-resale circuits. The billing codes used for filing year 2008 data are contained in the International Bureau's Public Notice DA 09-1526, *Annual Section 43.61(a) International Telecommunications Traffic Reports Due by July 31, 2009*, released July 13, 2009.

The table titles use billing types to indicate the type of data aggregated in a particular table. There are two groups of billing type codes for switched services. Billing types 1 through 6 are used for traditional settlement arrangements. Billing types 11 through 16 (though, as described below, there is not a billing type 13) are used for non-traditional settlement arrangements. Billing type 35 data are not aggregated in the tables. The billing types do not distinguish between a switched service provided over a carrier's owned facilities or a service provided using leased circuits.

The specific billing types allow the following breakdowns.

<u>Billing Type(s)</u>	
1, 11	U.S.-billed calls that originate in, or terminate collect or subscriber toll-free in, the United States
2, 12	foreign-billed calls
3	traditional transiting calls (there is no billing type 13 because all traditional transiting calls are exchanged under traditional settlement arrangements)
4, 14	U.S.-billed country-direct and country-beyond calls
5, 15	terminating leg of calls reoriginated by U.S. carriers and terminated via facilities-based or facilities-resale circuits
35	terminating leg of calls reoriginated by U.S. carriers and terminated via pure resale of another carrier's switched services
6, 16	originating leg of calls reoriginated by U.S. carriers

There are only two billing type codes used for private line services. Billing type 1 signifies facilities-based circuits. Billing type 11 signifies facilities-resale circuits.

Traffic Arrangements: U.S. carriers use the following types of arrangements to govern the exchange of traffic between themselves and foreign carriers.

1/ Traditional settlement arrangements consist of traffic settled pursuant to the Commission's International Settlements Policy (ISP). See 47 C.F.R. §§ 43.51(e), 64.1001, 64.1002 (2008).

In 2004, the Commission lifted the ISP requirements from agreements involving foreign carriers that do not have market power and on routes where the termination rates for U.S.-international services were below benchmark. See *International Settlements Policy Reform, International Settlement Rates, IB Docket No. 02-234, First Report and Order, 19 FCC Rcd 5709, 5723-25, paras. 27-28 (2004)*. Currently, 165 routes are exempted from the ISP. See http://www.fcc.gov/ib/pd/pf/isp_exempt.html. See also *U.S.-Cambodia Route Exempted from the International Settlements Policy*, Public Notice, IB Docket Nos. 02-324, 96-261, 20 FCC Rcd 963 (Int'l. Bur. 2005). For a discussion of benchmarks, see *International Settlement Rates*, IB Docket No. 96-261, Report and Order, FCC 97-280, 12 FCC Rcd 19806, 19806, ¶ 1 (1997); *Report and Order on Reconsideration and Order Lifting Stay*, 14 FCC Rcd 9256 (1999); aff'd sub nom. *Cable & Wireless P.L.C. v. FCC*, 166 F.3d 1224 (D.C. Cir. 1999).

2/ Non-Traditional settlement arrangements consist of all traffic other than traditionally settled traffic.

The following companies' section 43.61(a) international telecommunications traffic reports were combined because of mergers, acquisitions, and changes in corporate structure:

3/ Access Communications, LLC did not have any international services to report for calendar year 2008.

Addendum to Table 8

Note: Some previously published data have been revised.

- 1/ Data exclude pure resale traffic unless otherwise noted.
- 2/ Retained revenues shown for service that originates or terminates in the United States. These figures exclude revenues for calls that transit the United States. Retained revenues are calculated as revenues billed by U.S. carriers, less settlement amounts owed to foreign carriers for U.S. billed traffic, plus settlement amounts due to U.S. carriers for foreign-billed traffic.

* Traffic measures are specified in the Manual for Filing Section 43.61 Data, June 1995.

** In 2009, recognizing the *de minimis* nature of associated revenues and burden to file, the Commission granted MCI International Inc.'s request not to report its other miscellaneous international telex and telegraph services. The Commission, however, did require the carrier to retain the data for telex and telegraph services for two years from the date of the Commission's response to the carrier's waiver request (*i.e.*, until August 13, 2011). Other carriers that previously reported providing telex and telegraph services explained that they had either sold or discontinued the services. As a result, there are no data reported for these other miscellaneous international services in 2008.

Note: Carriers provide pure resale services by switching traffic to (and reselling the switched services of) underlying U.S. carriers. The underlying carriers control the circuit that carries the traffic to the international point, arrange for termination of the traffic and report the traffic on a country-by-country basis. Reporting underlying U.S. carriers' country-by-country data are available in Section A: Switched Services Telephone of this annual publication, International Telecommunications Data.
