

9-1-1 Location Technologies: Today and Tomorrow

03/11/2015

Tim Lorello

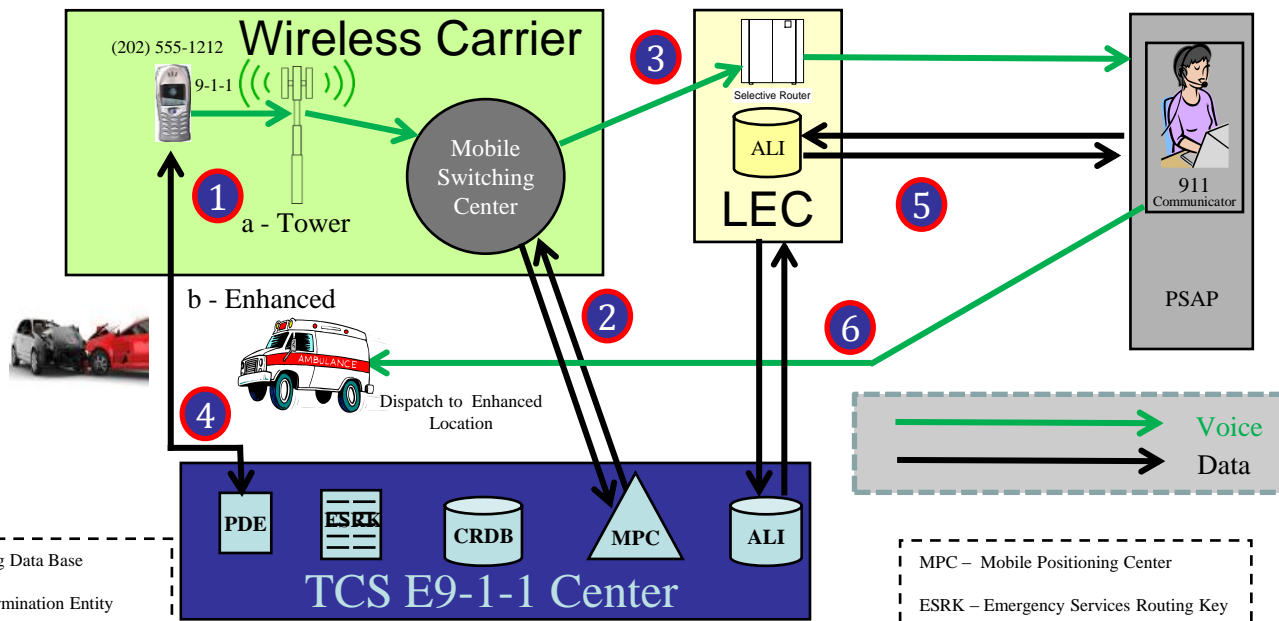

TeleCommunication Systems (TCS)

- Is 9-1-1 Location Technology Failing Us?
- The Challenge with Call Routing
- The Challenge with Enhanced Location
- The Challenge with Indoor Location
- What Can a PSAP Manager Do?
- Questions

CALL ROUTING CHALLENGE

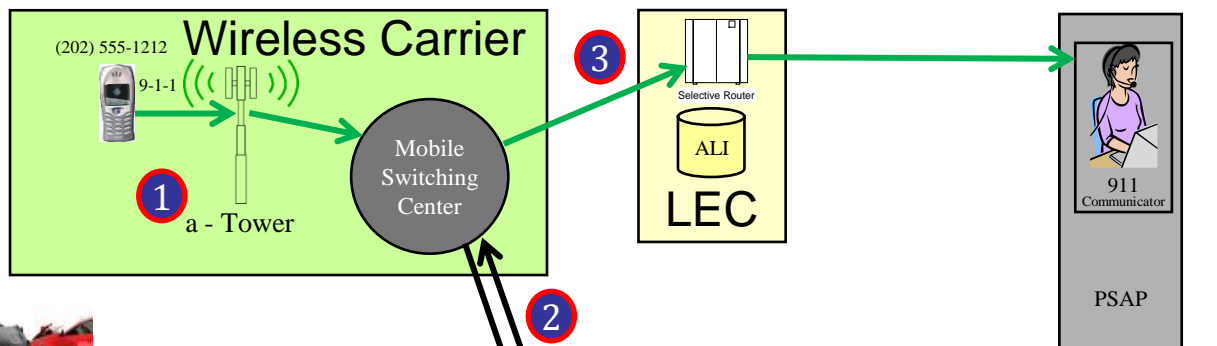

Wireless E911 Call Baseline

- 1: Person dials 9-1-1
- 2: MSC requests routing instructions
- 3: MSC routes call to nearest PSAP
- 4: E9-1-1 Center gets enhanced location
- 5: PSAP queries for enhanced location
- 6: PSAP dispatches assistance

Wireless Call Routing Challenge

- 1: Person dials 9-1-1
- 2a: MSC requests routing instructions
- 3: MSC routes call to nearest PSAP

2b: Route based on cell site/sector

CRDB – Call Routing Data Base
PDE – Position Determination Entity

MPC – Mobile Positioning Center
ESRK – Emergency Services Routing Key

Determining Call Routing

The screenshot shows the GeoLymx 9-1-1 software interface. The main map displays three cell sectors: Zone 1 (green), Zone 2 (yellow), and Zone 5 (orange). A red pin indicates the cell site location. The interface includes a left sidebar with 'Views' and 'Markups', a top menu bar with 'Clear', 'Print', 'Send', 'Issues', 'ENS', 'Cell', 'Refresh', 'Layout', and 'Help', and a bottom data table.

Position	Date/Time	Type	Phone	Caller	Address	Community	ESN	Law	Fire	Medical	L
105	6/6/2011 3:23:44 PM	Phase 1	(919) 450-8514	AT&T MOBILITY	2603 BROAD ST - N	DURHAM					
105	6/6/2011 3:23:23 PM	Phase 1	(919) 588-4287	SPRINT PCS WIRELESS	2603 BROAD ST - Sw	DURHAM					
105	6/6/2011 3:22:28 PM	Phase 1	(919) 563-1106	SPRINT PCS WIRELESS	1610 E PETTIGREW S	DURHAM					

- Cell site plotted
- Cell sector faced
- PSAP boundaries
- Primary PSAP
- Determine route

GeoComm
base work.

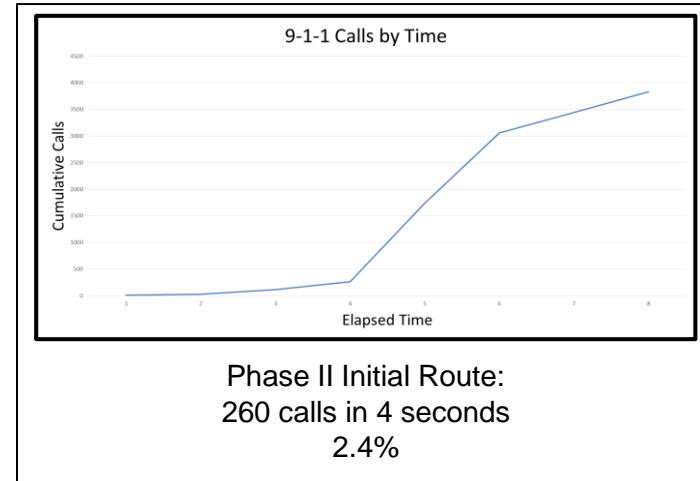

- Today's solutions:
 - CPE Option: Delay the call routing
 - But how long can we afford to wait?

Call Routing Delay

Washington DC
May, 2013
Single carrier

11,585 calls
10,812 bids
6.7% abandoned

1 second delay:	+1474 calls	= 16.0%
2 second delay:	+1324 calls	= 28.3%
3 second delay:	+384 calls	= 31.8%
4 second delay:	+387 calls	= 35.4%

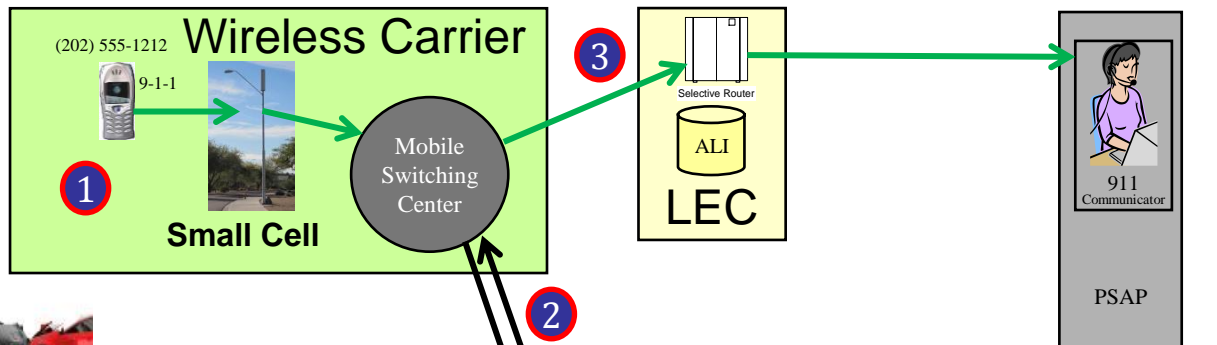

Delay not enough!

- Today's solutions:
 - CPE Option: Delay the call routing
 - But how long can we afford to wait?
 - Wireless Infrastructure Option: Faster CRDB lookup
 - Small cells

Small Cell – Just Another Tower

- 1: Person dials 9-1-1
- 2a: MSC requests routing instructions
- 3: MSC routes call to nearest PSAP

2b: Route based on small cell “tower” mapping

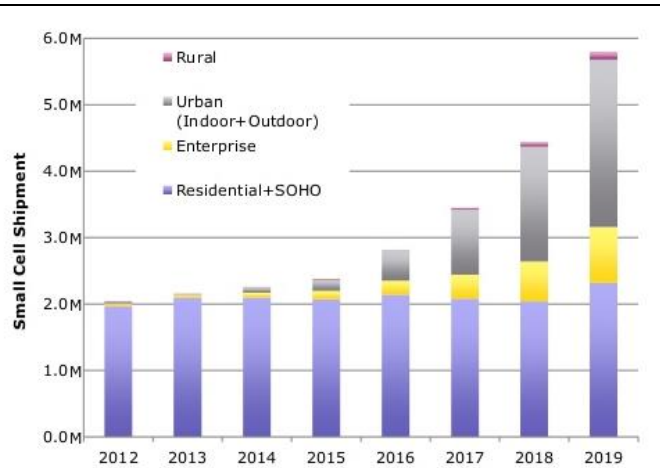

CRDB – Call Routing Data Base
PDE – Position Determination Entity

MPC – Mobile Positioning Center
ESRK – Emergency Services Routing Key

Strong Small Cell Growth

Overall, the Macquarie analysts estimated that there are about 40,000 small cells deployed in the United States today. *FierceWireless 1/13/15*

Small Cell Forum 12/14

AT&T has committed to deploying more than 40,000 low-power small cells by the end of 2015 as part of Project Velocity IP (VIP), a multibillion-dollar overhaul program for both its wireless and wired networks. *FierceWireless 12/19/13*

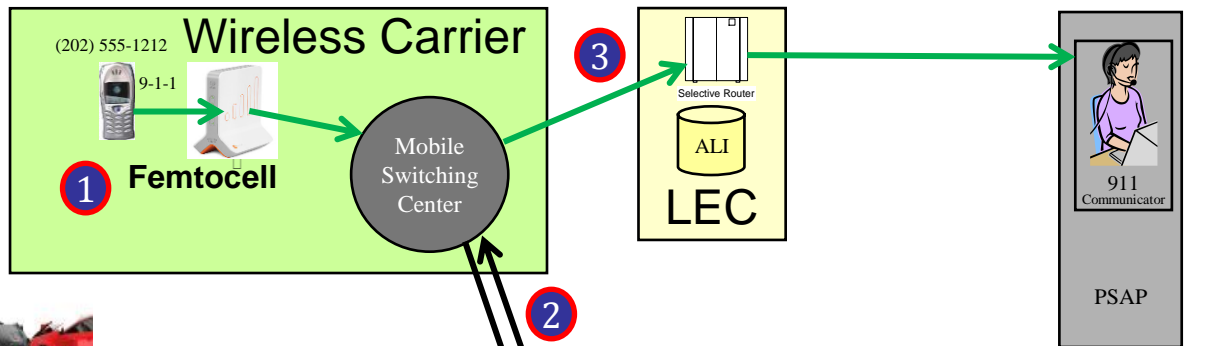

Verizon is putting aside \$500 million for network densification, led by small cells, in certain markets, the carrier's CFO said Tuesday. *LightReading 2/17/15*

Sprint is preparing to add small cells to its network to expand the reach of its LTE service, and that effort will most likely cost the carrier around \$500 million per year.... *FierceWireless 1/13/15*

- Today's solutions:
 - CPE Option: Delay the call routing
 - But how long can we afford to wait?
 - Wireless Infrastructure Option: Faster CRDB lookup
 - Small cells
- Tomorrow's solutions:
 - Femtocells

Femtocells – A VoIP Call Model

- 1: Person dials 9-1-1
- 2a: MSC requests routing instructions
- 3: MSC routes call to nearest PSAP

2b: Route based on Femtocell address

CRDB – Call Routing Data Base
PDE – Position Determination Entity

MPC – Mobile Positioning Center
ESRK – Emergency Services Routing Key

Femtocell Shipments
World Markets, Forecast: 2012 - 2018

Jan. 2013

Source: ABI Research

- Femtocells for home use
- Support specific users
- Generally located via GPS
- Typically associated with cell tower

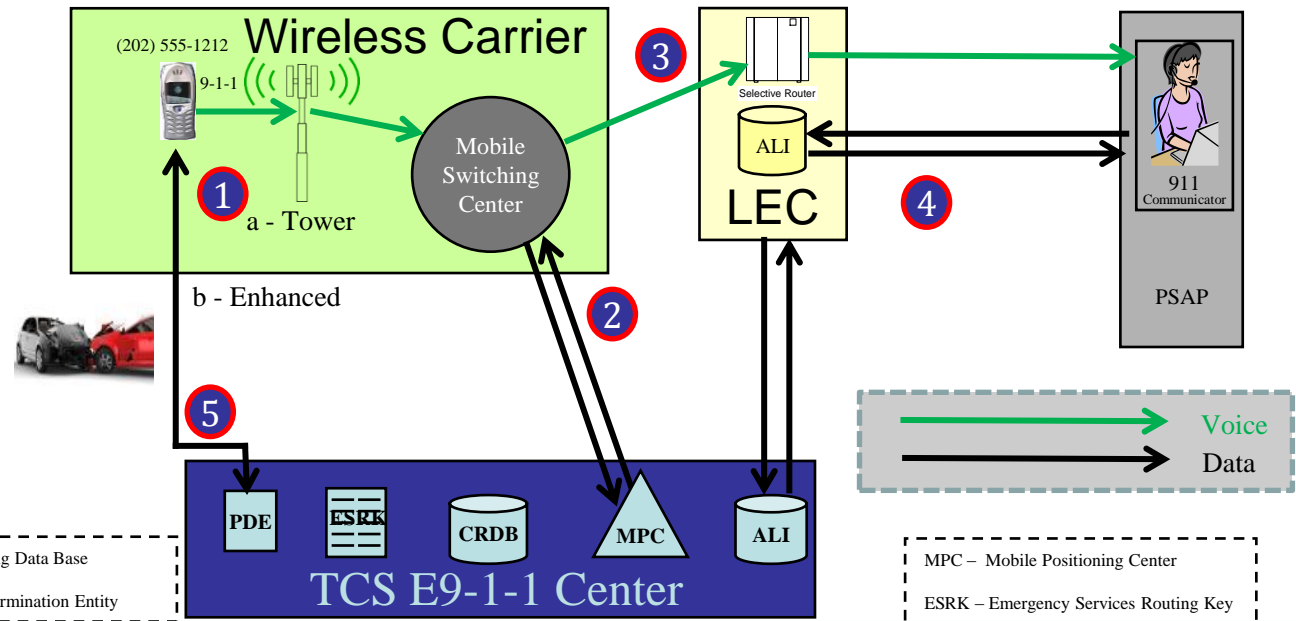

- Dispatchable location possible
 - Follow VoIP registration process

- Today's solutions:
 - CPE Option: Delay the call routing
 - But how long can we afford to wait?
 - Wireless Infrastructure Option: Faster CRDB lookup
 - Small cells
- Tomorrow's solutions:
 - Femtocells
 - Indoor location techniques...

ENHANCED LOCATION CHALLENGE

Wireless Location Challenge

- 1: Person dials 9-1-1
- 2: MSC requests routing instructions
- 3: MSC routes call to nearest PSAP
- 4: PSAP queries for enhanced location
- 5: E9-1-1 Center gets enhanced location

Initial Bid Timing vs. Location Fix

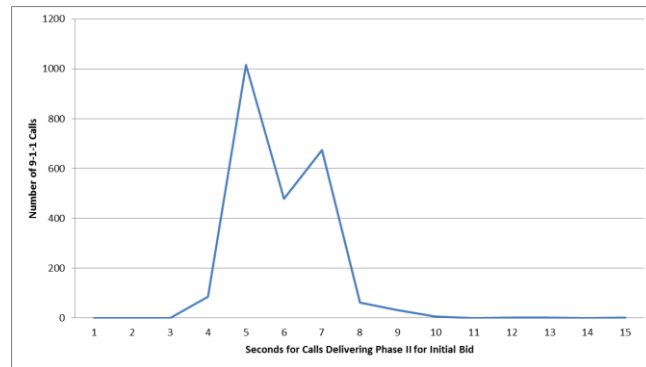

Washington DC
May, 2013
Single carrier

11,585 calls
10,812 bids
6.7% abandoned

Initial Bid generally <8 sec

...but location fixes can take up to 24 seconds

Phase II Initial Bids: 2386
22.1%

1 second delay: +283 calls	= 24.7%
2 second delay: +304 calls	= 27.5%
3 second delay: +134 calls	= 28.7%
4 second delay: +125 calls	= 29.9%

Delay not helpful!

- Today's solutions:
 - CPE options
 - Re-bidding

- Rebidding often is not done
 - Washington DC: 1.8% (191 of 10,811 calls)
 - CalNENA policy not to re-bid: 2006 thru 2014
 - Dispatch info sometimes overwritten by re-bids

On initial bid

75.4% Phase I
 0.7% Poor Phase II
 21.8% Phase II A-GPS
 2.1% Phase II AFLT

After 30 seconds:

10,794 of 10,811 calls = 99.8%

11.1% Phase I
 1.7% Poor Phase II
 73.2% Phase II A-GPS
 13.9% Phase II AFLT } 87.1%

- Today's solutions:
 - CPE options
 - Re-bidding
 - Wireless Infrastructure Option: Faster enhanced location techniques
 - Improved A-GPS

• Adding GLONASS improves accuracy and timing Tokyo

Using dual GPS/GLONASS receivers and antennas **accelerates the time to first fix**, and the M2M device may have as many as twice the satellites at its disposal for determining location.

<http://electronicdesign.com/test-and-measurement/real-world-drive-tests-declare-verdict-gpsglonass>

	Constellation	GPS	GPS + Glonass
In 24 hours	Visible Satellite*	4.4	7.8
2.5x better	No Fix	380 minutes	Never
Horizontal Dilution of Precision	HDOP*	5.3	2.1
	Error*	x meter	(x* 0.4) meter

Teseo II single-chip GPS receivers

■ TII GPS
■ TII GPS+GLO

- Today's solutions:
 - CPE options
 - Re-bidding
 - Wireless Infrastructure Option: Faster enhanced location techniques
 - Improved A-GPS
- Tomorrow's solutions:
 - Observed Time Difference of Arrival (OTDOA)

Observed Time Difference of Arrival

Part of LTE standard
3GPP Release 9+

Macro cells coordinate a dense group of small cells

Reasonable location accuracy from close small cell proximity

Location accuracy determined by propagation errors

- Today's solutions:
 - CPE options
 - Re-bidding
 - Wireless Infrastructure Option: Faster enhanced location techniques
 - Improved A-GPS
- Tomorrow's solutions:
 - Observed Time Difference of Arrival (OTDOA)
 - NG9-1-1

NG9-1-1 brings two benefits to improving location

- Location data is pushed rather than pulled
 - No need for re-bid strategy
 - Location information can be presented as it becomes available

- Multiple location elements can be sent – courtesy of PIDF-LO
 - A-GPS fix
 - OTDOA fix
 - Street address from indoor location techniques
 - Billing/work addresses

**Presence Information
Data Format -
Location Object**

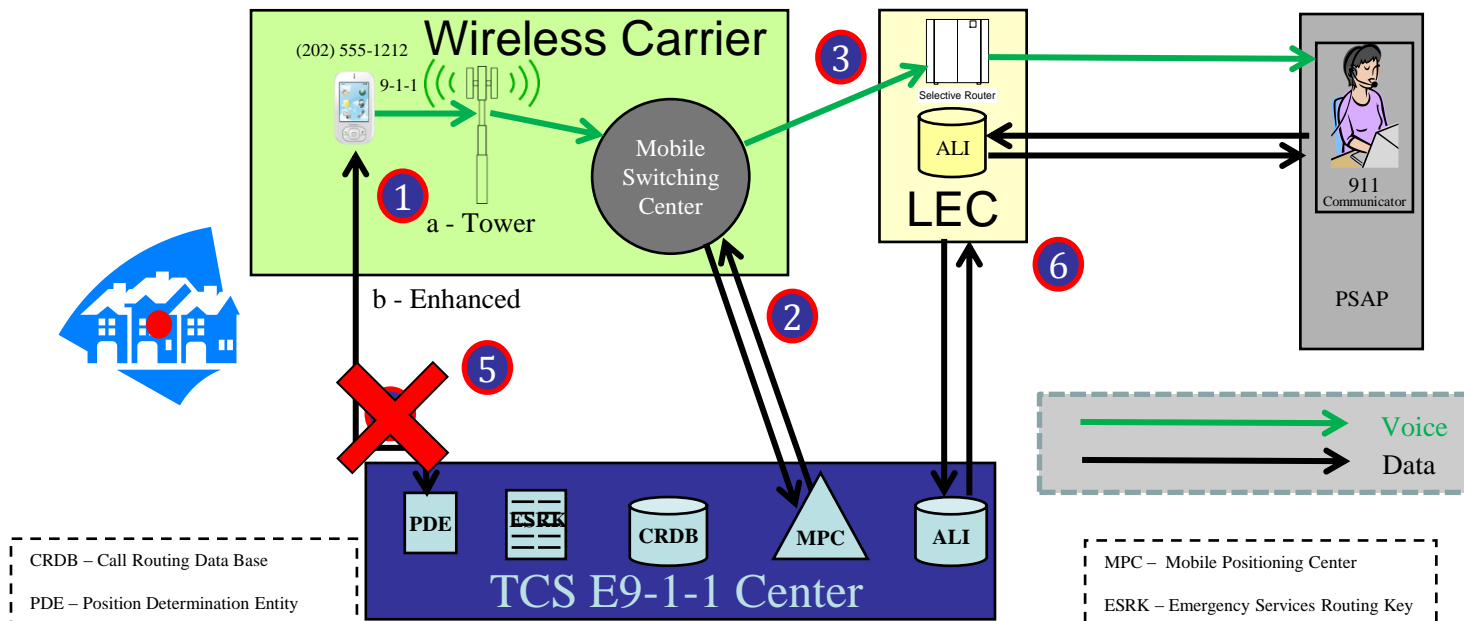

- Today's solutions:
 - CPE options
 - Re-bidding
 - Wireless Infrastructure Option: Faster enhanced location techniques
 - Improved A-GPS
- Tomorrow's solutions:
 - OTDOA
 - NG9-1-1
 - Indoor location techniques....

INDOOR LOCATION CHALLENGE

Indoor Location Challenge

- 1: Person dials 9-1-1 from indoors
- 2: MSC requests routing instructions
- 3: MSC routes call to nearest PSAP
- 4: E9-1-1 Center gets enhanced location
- 5: A-GPS location technique is blocked in some indoor settings
- 6: PSAP queries for enhanced location – but only gets Phase I

- Is there an Indoor Location problem?

- Evidence of a Problem
 - Statistics tell a story
 - Analyzing real-world 9-1-1 data
 - Long-term 9-1-1 data comparison
 - 9-1-1 data trending
 - Comparing urban/suburban to dense urban

We “should” have an Indoor Location challenge

- 40% of US population has “cut the cord”
 - 2013 CDC study (37% of adults; 45% of children)
 - <http://www.cdc.gov/nchs/data/nhis/earlyrelease/wireless201306.pdf>
- 70% of 9-1-1 calls come from wireless
 - 2012 King County, WA statistic

- » Actual 911 calls
- » Tarrant County
- » All carriers
- » August, 2013

Color-code X/Y locations
(using HUNC)

Brown = Phase I only
Green = meets stricter requirement.
Red = misses looser requirement.
Yellow = between strict/loose

Which are Indoors?
Which are Outdoors?

Uncertainty Tells a Story

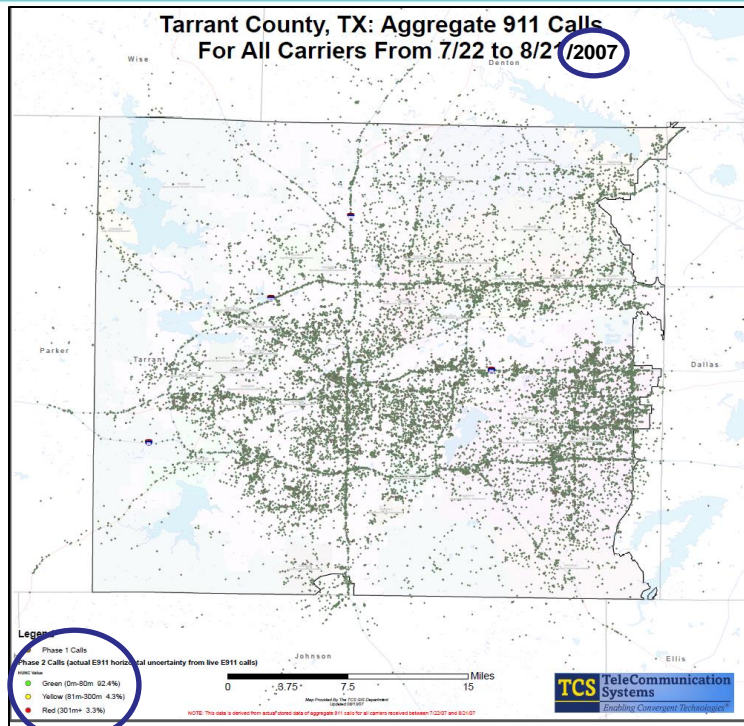

» Uncertainty/Accuracy correlates
□ Can draw roadways

» Uncertainty error clusters

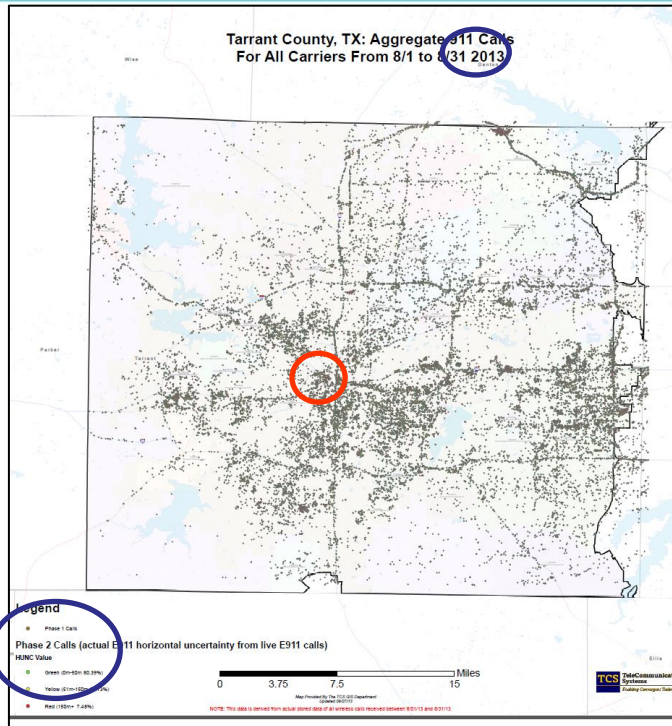

Tarrant County, TX –
Multiple wireless
carriers – August, 2013
data

Uncertainty Error Clusters

3.3% exceeded Phase II upper bound (red)

7.5% exceeded Phase II upper bound (red)

3.3% → 7.5%
(more calls from indoor locations?)

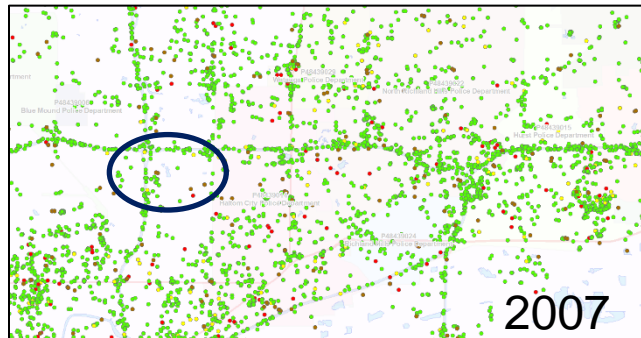

The Maps Tell a Story

Tarrant County, TX
9-1-1 Calls –
August, 2013

Data Trends Tell a Story

Nonexistent in 2007

Major problem area in 2011

Improved in 2012

Greatly improved in 2013

Problem area seen in 2011

Goodrich Warehouse
Built in 2007

- Baltimore 9-1-1 calls (Nov, 2014)
- Tarrant County 9-1-1 calls (Aug, 2013)

	Tarrant County	Baltimore
HUNC <= 50m	80.4%	45.3%
HUNC 50m<-->150m	12.1%	11.2%
HUNC > 150m	7.5%	43.5%
Total	100.0%	100.0%

HUNC is a distance/range calculated by the Location Engine
 Determines the range of location “error” based on Confidence value
 Confidence (90%) expresses likelihood to find device within HUNC range

- Is there an Indoor Location problem?
- Today's Solutions:
 - Small cells
 - Femtocells
 - Using A-GPS (yes, it can work indoors)

A-GPS Even Works Indoors

Legend

- ▲ True Location
- Motorola
- Sanyo

Royal Institute of Navigation
The Journal of Navigation
July, 2011 Vol. 64 No. 3
pp. 381-399

In the **static indoor test**, mobile phones and GPS units were placed in very close proximity on top of a regular wooden desk on the **second floor of a two-story residential structure**. The second floor of the structure consisted of a **wood frame with cement stucco** while the **roof consisted of a wood frame with asphalt shingles**. While GPS signal reception within this structure is possible (even without using a high-sensitivity chipset), the reception was severely affected by the building materials, resulting in lower expected accuracy.

NO. 3 POSITIONAL ACCURACY OF ASSISTED GPS 395

Table 3. Horizontal error statistics for static indoor tests.

Unit Type	GPS Type	Sample Size	% GS Fixes	Horizontal Error Statistics (meters)						
				Min	Max	Avg	50th	68th	95th	RMSE
Motorola	Assisted	478	99.8	0.74	90.69	15.16	9.78	15.15	47.90	21.64
Sanyo	Assisted	1513	99.9	0.16	32.04	8.78	6.23	9.33	24.44	11.33
Garmin	Autonomous	319	17.7	0.41	23.22	9.11	7.62	10.03	20.86	10.61
Juno	Autonomous	1800	100.0	0.35	18.94	5.10	4.02	5.64	12.86	6.16

More Satellites = Better Indoors

- GLONASS - Deployed now
 - Russian ownership
 - Full global coverage
 - 21+3 satellites
 - 4-7m horizontal; 10-15m vertical precision
- Galileo – Deploying
 - European Union ownership
 - Full global coverage
 - 4 satellites now; 27+3 by 2019
 - 4m horizontal; 8m vertical precision (paid)
- Beidou – Deploying (COMPASS)
 - Chinese ownership
 - Regional, expanding to global coverage
 - 30+5 satellites
 - 25m horizontal; 30m vertical precision

Combining
satellite
systems is
expected to
double
precision

- Is there an Indoor Location problem?
- Today's Solutions:
 - Small cells
 - Femtocells
 - Using A-GPS (yes, it can work indoors)
- Tomorrow's Solutions:
 - Wi-Fi®
 - Bluetooth®

- Smartphone locates nearest Wi-Fi Access Point

Smartphone detects Wi-Fi AP

- AP presents its MAC ID
- Smartphone measure signal strength
- Smartphone presents info to location server

- Nearest Wi-Fi Access Point locates nearby smartphone

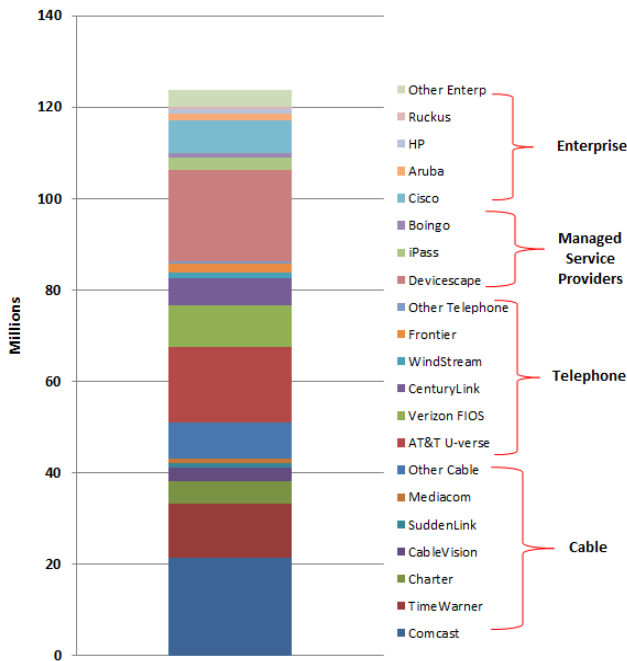

Wi-Fi AP detects smartphone

- Smartphone presents its MAC ID
- AP measure signal strength
- Multiple APs can triangulate the smartphone
- AP system presents info to location server

Wi-Fi Availability in the U.S.

There are over 126M WiFi Access Points in the US from identifiable residential and enterprise providers. Approximately 86M are deployed in residences and 40M in enterprises/public access areas.

Wi-Fi Access Points by Provider, 2014

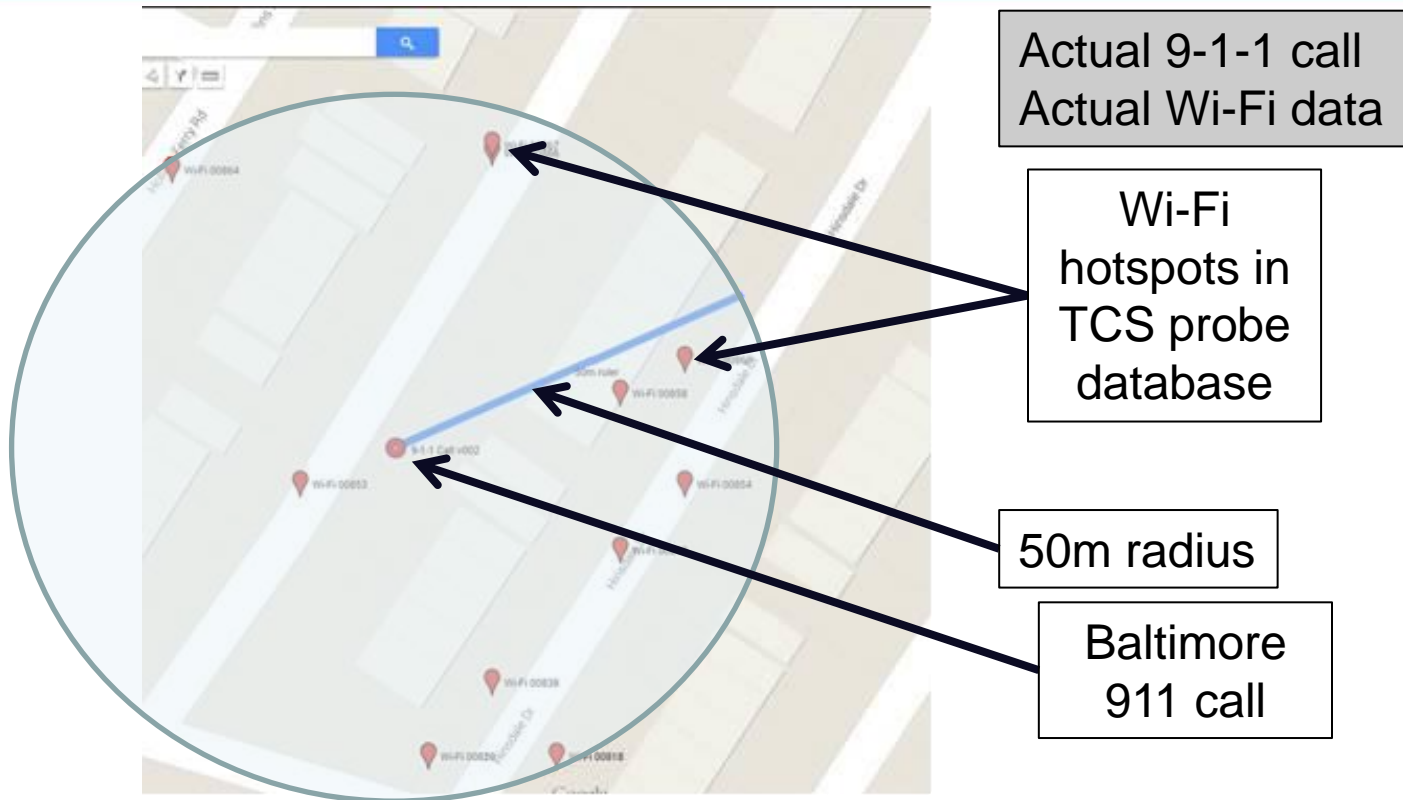

Source: company information and ABI Research, 2014

149M Access Points

Wi-Fi coverage exists
And it Maps to population

The screenshot displays the TCS GEM911 interface. On the left, a chat window shows a conversation with a user. The chat history includes messages such as "Yes", "Can you call 911?", "I tried. Bad coverage. Call wouldn't go through.", and "An ambulance is on the way. We can continue with text messaging." Below the chat is a "Send Message" button and a "Transfer" button. On the right, a map shows the location of the incident. An "indoor location" window is open, displaying the following information: "Campus: Richardson TX 75082", "Building: Cisco Building 5", "Floor: 2250 East PGBT First Floor", "Uncertainty Radius: 7.32 meters", and "Zoom:". The floor plan below the text shows a red circle indicating the location of the device, with various rooms and corridors highlighted in green, blue, and orange. The interface also includes a top navigation bar with "TCS GEM911", "Help", and "Sign Out (kcsa user one)".

WHAT CAN A PSAP MANAGER DO?

What Can a PSAP Manager Do?

- To help with call routing:
 - Pay attention to boundaries
 - Track call transfers – if too many, change boundaries
- To help with caller location:
 - Determine a rebid policy/strategy for your center
 - Get data; look for error clusters; encourage small cell use
- To help with Indoor Location:
 - Help get addresses in the NEAD (National Emergency Address Database)
- Get GIS maps for neighboring counties!
