

Project Roll Call

*Identifying Who's Still On The Air
(and Who's Not)*

Project Roll Call

- In the wake of a National-level disaster, the effectiveness of first responders and critical infrastructure managers is sometimes hindered by disrupted or destroyed communications systems.
- Restoring or replacing these systems is a high priority for Federal responders.

Project Roll Call

- FEMA and the FCC are working together to identify disaster-related communications outages and help with their restoration.
- We do this by analyzing radio signals before and after the disaster and comparing those results to licensee databases to determine which public safety or critical infrastructure systems are unexpectedly off the air.

Five Essential Spectrum-Based Communications Systems

- Public Safety Communications
- Critical Infrastructure Communications
- Federal Government Communications
- Broadcast Services
- Wireless Phones
