

I currently subscribe to both Cable and Satelite service. I am forced into this arrangement and additional cost because my cable company cannont provide adequate programming, my satellite provider can't provide local channels, and my telephone company can't provide DSL broadband service. I will be moving to a new area that isn't served by any cable company and will have to rely soley on the satellite provider. However, I will not be able to receive local TV broadcasts and will not have broadband service available at all. ...unless this merger is approved and we have some options. I urge you to lend your support to this propped merger.
