

My name is Danielle Strickler. I live in Elizabethtown Lancaster Pennsylvania. I am so tired of the high prices of cable so I went to satellite (Dish network Echostar). I don't think it is right for my local channels to tell me I have to be with cable to get them or have to have an antenna to get a very fussy picture of my local channels. In my opinion Satellite is much better quality at a cheaper price. Not only that but with satellite we have the option to buy the satellite dish and however many receivers we want to have which the start up charge is \$199. The cable receiver alone is at least \$300. that doesn't make sense. If passed a law saying that cable is allowed to carry all local channels all over America so should Satellite companies. This is after all The United States of America and I thought on of our constitutional rights were freedom of choice. If I want to choose satellite and have my local channel to come with it that is my choice. Every American in this country should have that same right. Besides Satellite has more channels to choose from than cable.
